NEW ENGLAND'S flood be-
comes more alarming in its
extent, lives lost and damage
done. The President immedi-
ately orders army fliers to cover
the stricken district and report. Fly-
ing machines are now the eyes of
government, as they will be the
reliance and defence of govern-
ment in war.

Secretary Davis will have the
War Department have everything
possible in the way of supplies
and men that may be needed,
army headquarters in Boston
supplying them.

Stocks went up yesterday.
Steel, General Motors, many
others. Wall Street learns that
new financing this year amounts
to more than six thousand mil-
lion dollars, eclipsing 1926 by
about a billion. All this new wealth is absorbed
with ease, in a country with peo-
ple that earn every year ten
billion more than it costs to live.

Larger deposits in Southern
banks are reported from Mem-
phis throughout the entire sec-
tion. In that, and the high qual-
ity of cotton adding to the value
of the crop, there is good news
for the whole country.

Conditions for harvesting the
crop at low cost are ideal, and
the gloom of a year ago turns to
sunshine.

A sent on the San Francisco
Stock and Bond Exchange sold
yesterday for \$100,000 to George
D. Robertson & Co., Inc.
Eighteen months ago the price
of a seat was \$30,000.

This reminds New York that
San Francisco, on the Pacific
ocean, 3,000 miles away, is also a
great financial center. San Fran-
cisco Stock Exchange sales have
increased in value more rapidly
than New York seats. And in
proportion to population, stock
exchange sales in San Francisco
surpass six times as much as
on the New York Exchange.
There is still a chance for young
men, including financial young
men, to go West.

A Japanese fishing boat drifted
ashore on the State of Washing-
ton coast, every man on board
dead. A diary was found, writ-
ten at first by Sutekichi Iwara,
and then by dead, carried on by
Gonosuke Matsumoto. Pitiful
prayers were addressed to Kom-
pira, God of Japanese sailors,
and threats, and as yet prayers.
Mr. Kompira, have pity on me,
we shall throw away thy charms."

He did not have pity, all died.
Many gods like Kompira, have
no real experience, have had
many prayers since the time of
time. Real or unreal, all
gods have been a great com-
fort to those that believed in
them. Their worshippers have
alternately cursed and threat-
ened them, often overturning
their images in anger.

Everybody remembers how the
heaven gods fell in estimation
when the Jewish God's prophet
was able to bring down fire from
heaven to light his bonfire, as
though he had soaked it with
water. Men could not live with
out religion; even a false one is
better than none. Voltaire truly
said: "If there had been no God,
it would have been necessary to
invent one."

In Hungary two students, vio-
lently anti-Semitic, were sur-
prised when challenged to duels
with sabres by two Jewish stu-
dents. They were more sur-
prised when the two Jews, first
class swordsmen, carved them
up.

New eight other young Jews
have challenged eight other anti-
Semitic students to fight with
sabres.

In course of time that should
make anti-Semitic students
thoughtful. To fight with sabres
is no joke, not at all like the
rapier combat duelling in German
universities.

When men fight with sabres,
they are stripped to the waist,
nothing to protect jugular vein or
anything else. And a heavy
saber is no child's toy. Many a
man has been killed in such "af-
fairs of honor" among German
officers.

At Naples yesterday a tall,

NEW ENGLAND'S GREATEST NEWSPAPER CIRCULATION

BOSTON, SUNDAY, NOVEMBER 6, 1927

RAIN SOFTENED THE FLOOD CUTS MILK SUPPLY 80 PERCENT

JACKSON DIES AS HE FIGHTS WAY IN FLOOD

Body of Vermont Lieutenant-Governor Found by Searchers in Brook

VANISHED IN TORRENT

Slips From Running Board of Machine Into Murky Waters Near Barre

While fighting his way against the flood to get to his home and family, Lieut. Gov. S. Hollister Jackson of Vermont lost his life in Barre on Thursday night, it became known last night when that city's roll of the dead became known.

Lieut. Gov. Jackson, warned by friends not to attempt to reach his home in the terrible part of the city, the section most affected by the flood, in which that his place was with his family.

He started forth in his automobile along a road over which a moving stream was flowing. He battled the flood tide for several miles and was within sight of his home when his car stalled. He stopped out, slipped on the running board and disappeared in the water. Searching parties, including members of the Barre unit of the Vermont National Guard, hunted fruitlessly all during Thursday night and by daylight found nothing but his overcoat, which had been thrown out of his automobile when it was overturned by the rage of the flood waters.

SEARCHERS FIND BODY. Late on Friday searchers found the body of the Lieutenant-Governor in Putnam brook, about a mile.

Flood Victim

Lieutenant-Governor Jackson of Vermont, who perished as the flood swept through Barre. His body has been recovered.

ARMY LISTS 28 WATERBURY DEAD

By the Associated Press. Through Army sources it was reported last night that 28 persons are dead and nearly 100 injured in Waterbury, Vt., northwest of Montpelier. The information was contained in a cablegram to the Army from Col. Frank H. Allen, which said: "First information from refugees from Waterbury state that 28 were drowned there and many are homeless. Food and medical supplies are badly needed. Route through smugglers' paths if possible. An aerial search and wagon trains that way will help."

At Waterbury is situated the Vermont State Hospital for the insane.

RELIEF BIRDMAN TWICE FORCED BACK. Michael Phil, N. Y., Nov. 5 (A.P.)—Twice forced back by oncoming trouble in an effort to fly to Boston in an amphibian plane for a survey of flooded New England, Lieut. Newton H. Longfellow, U.S. Army, abandoned the attempt to get off.

He said he would make the flight tomorrow morning.

10,000 IN CITY AND 2 TOWNS DRIVEN OUT

Springfield, West Springfield and Agawam Hit by Fury of Flood

TORRENT IS SPREADING

Troops Called in Northampton; Hadley Fighting to Save Dike

Springfield, Nov. 5 (A.P.)—Fully 10,000 people were routed from their homes in this city, West Springfield and Agawam tonight as the flood reached its greatest fury in this vicinity.

Armed guards to every house, patrolled the stricken neighborhoods and signs of rescue were so numerous to be passed almost unnoticed.

Northampton and the town of Hadley across the Connecticut River were faced with a serious situation caused by rising flood waters cut off inter-communication and forced authorities of both places to issue orders for forcible evacuation of scores of houses along the stream.

In Northampton Mayor William M. Welch called out Company G, of the National Guard, to go on night duty, and with police, firemen and volunteers to help in the work of rescue, and, where necessary, to make summary executions.

Refugees from Waterbury, Vt., have reported 28 drowned. Several persons are known to have lost their lives in the floods and storms in New England in the last three days. Of these 11 have been identified.

A walking river three-quarters of a mile wide spread across the low land into the village of Richmond. Ninety persons were drowned in an uncompleted story and a half frame house. In 25 feet in size, which would also three horses, six logs and 250 tons of lumber. The flood rose to within six feet of the roof.

The known dead: Barre, Vt., Lieut. Gov. S. Hollister Jackson of Vermont; Ralph Winters, Gerald Brock, Dean Richard Thomas.

DEATH LIST REACHES 123 AS DANGER ZONE SPREADS SOUTH

THOUSANDS MADE HOMELESS

Troops Called Out in Northampton as City Is Menaced; Springfield Feels Brunt of Torrential Waters While Crest Rushes Onward; At Least 100,000 to Bring Succor Today to Stricken Regions; Damage Estimated at Millions

New England's great rain and flood now threatens the babies of Greater Boston.

So many railroad bridges have been swept away that so many miles of track have been washed out, that the milk supply of the great wholesalers has been reduced to one cent.

At an early hour this morning the number of those who lost their lives in flood and storm was placed at 123. Communication has been generally re-established, however, and fatalities are now being reported from the West. The money has been raised high into the millions. Bridges still under way are down, factories flooded, roads destroyed, automobiles ruined, and some of the main highways.

Never before has this section of the United States been visited by such a calamity.

At least 10,000 persons have been driven from their homes in the valleys of Central Vermont and Western Massachusetts, some of the homes destroyed.

PHOENIX, Ariz., has been identified up to 1 o'clock this morning. The largest loss will fall upon the railroad, some of them only recently placed upon a racing track.

There is no railroad communication between Boston and Montreal, or Boston and Quebec. The Boston & Maine Railroad is carrying passengers no further north than Manchester, N. H.

GOV. FULLER IN APPEAL. Flood officials said last night that the great milk companies can produce no more than 20 per cent of their normal supply for the next few days. They are appealing to the Governor for relief. They are appealing to the Governor for relief. They are appealing to the Governor for relief.

The Governor's appeal is directed especially to clubs, hotels and restaurants. There, his Excellency believes, can get along for a few days on hoarded or collected milk.

THE OFFICE WILL HAVE TO BE MADE FOR ONLY A FEW DAYS, the affected railroad being already hard at work upon repairs and replacements.

The last news of Saturday came with the report that deaths in Montpelier, Vt., could not be less than 25. The Vermont capital had been except by radio, for more than 48 hours, from the outside world. A report that the death toll had reached 200 had been the last news of the country. By way of White River Junction.

The most conspicuous Vermont

FLOOD NOTICE TO THE PUBLIC

As a result of the flood in the Berkshire Hills, near Becket, Mass., the main line of the Boston & Albany R. R. is completely destroyed for three and a half miles. Three bridges over the Westfield River have been carried away. It will be some time before even a single track can be rebuilt and opened for service.

Nevertheless the railroad will continue to run all of its through trains from Boston to and from the West. Detours over other railroad lines will be necessary, and the public is advised that, as the result of this condition, all Western trains will be several hours late in arriving at destination.

BOSTON & ALBANY R. R.

HERBERT HOOVER III IS BORN IN BOSTON

HERBERT H. HOOVER, III, grandson of the Secretary of Commerce, was born yesterday in a Boston hospital. The baby's weight was given as 25 pounds, and both he and his mother, the former Miss Margaret Watson of San Francisco, are expected doing well.

— the milk situation

In response to the many inquiries relative to the milk supply for Boston and vicinity, we wish to make the following announcement:

RABBIES, WITCHES, INVALIDS AND HOSPITALS will be taken care of first. Fortunately, we obtain many thousands of gallons of milk produced in Massachusetts and nearby territory not affected by the flood.

We hope to maintain a supply during the next few days as close to normal as possible in the following manner:

All extra milk available has been borrowed from the neighboring unaffected area.

Emergency truck crews have been concentrated on both sides of the flooded area to quickly move milk along all possible roads.

H. P. Hood & Sons Dairy Experts

First Pictures Showing Ruins of Town That Was Becket

MAIN STREET. Only a few days ago a smooth highway, now ripped up and reduced to this chaotic state by the flood disaster, the most severe in New England's history. The roadway is strewn with uprooted trees.

CUT AWAY as if by a giant's cleaver was the side of this house in Becket, but the structure held together in this odd fashion even after it had been carried away and dropped to the ground with a terrific shock by the mad rush of water. The chimney is standing, and the stove may be seen in its accustomed place in the kitchen on the first floor.

BECKET'S "PAUL REVERE." Joseph C. Ballou, who watched all night until rising water crushed his mill dam above the town, and then dashed in his automobile to the town, warning all to flee for their lives.

MAIN STREET MOVED 100 YARDS when the flood struck the town of Becket, Mass., and practically wiped out the town. These houses were carried that distance back from the street, dropped to earth and demolished.

WRECKAGE of what was a home on Becket's main street, carried away by the turbulent torrent and twisted into a tangled mass of debris.

BOY SCOUTS of Dalton and Pittsfield hastily set up an improvised tent kitchen at Becket to feed State police who had arrived to perform rescue work and guard the ruins of the town. These photographs were made by Lester R. MacLellan, Boston Sunday Advertiser staff photographer.

A VIVID PICTURE of the power of the floods that raged through New England is painted by this photograph, showing houses that had been torn from their foundations and tossed about like cockle shells on the bosom of the angry water, to be dropped far from their original sites.

First Man to Land Finds Montpelier Facing Hunger

**HAVOC GREAT,
SAYS ALBANY
NEWS WRITER**

**Vermont Capital, Marked by
Diamond Ruin, Needs Help
"From Outside"**

(Editor's Note—An eye-witness description of the flood-desolated area surrounding Montpelier, Vt., was telephoned out yesterday by Charles H. Moran, on the staff of the Albany Times-Union, after he had made an airplane flight over the flood area.)

By CHARLES H. MORAN
Burlington, Vt., Nov. 5.—Many of them without shelter, with a limited supply of food, and with communication with the outside world interrupted, the people of Montpelier, capital of Vermont, were flooded with exposure to hunger and cold tonight as the flood waters which have destroyed their homes swelled in a flood from outside Montpelier.

Landing our airplane on a hillside, just outside of Montpelier, this afternoon, my companions and I entered the floodwater city by automobile. We were the first to land since the residents had seen for 48 hours.

We found indescribable desolation. There were three persons dead in Montpelier as a result of the flood.

HELP IS REQUIRED.
Hundred of persons surrounded Wilson, the filer, and myself when we reached the city, and we were made to know what attempts are being made for their relief and that the outside world is aware of this condition.

I told them that the people of the State are attempting to reach them and that the strange story of the "city of silence" has aroused the nation.

DAMAGE \$2,000,000.
Down railroad bridges are down and are twisted and torn by the runs of heavy waters.

The property damage here, people told me, is about \$2,000,000, although the city has a population of only 10,000.

Further flood menace here, except from hunger and cold, apparently is over. The water has receded and the citizens are beginning to get out of their homes.

They told me it was a miracle that several hundred persons were not killed as the rush of flood waters was so terrible and swift.

A man by the name of Martin was killed as he worked in a quarry near the city, a huge wall of water came down and filled the quarry before he had time to take a step.

Myself, Byron Nelson also was killed.

ALL FUEL CONFISCATED.
The devastation here was caused by the Winouski river, which, swollen by rains, overflowed its banks and covered a territory of about 50 miles, including Montpelier.

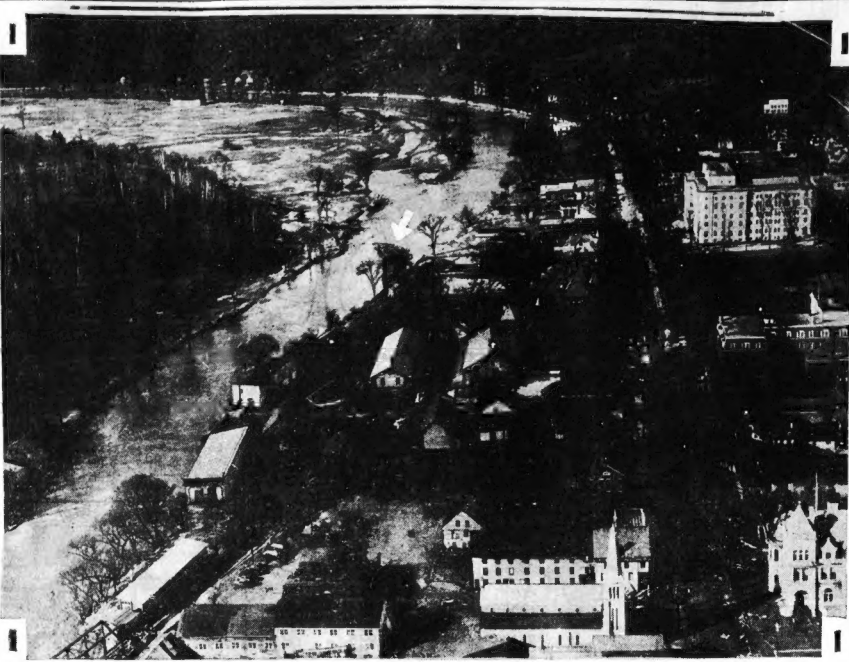

No material lay outside Montpelier. The residents are faced with suffering from cold.

All fuel has been confiscated, and is hoarded on an order. There is a slight possibility that the food supply will be cut off, unless help comes from outside here in a few hours.

It is impossible to describe the terrible devastation wrought by the overflow of the river and the work back of this little hill-topped city.

The State Capitol, nearly half a mile from the river, was filled with overturned automobiles.

View From Airplane of City of Montpelier Desolated By Flood

WITH ALMOST THE SUDDENNESS OF A THUNDER STORM, the terrifying force of a torrent descended upon the beautiful capital of Vermont, leaving death and destruction in its wake. This photo, taken from an airplane by Charles G. Snyder for the Boston Sunday Advertiser, shows the vicinity of the capital building in the inundated city. The arrow points to the remains of a bridge on the Winouski river which collapsed before the mighty force of the rushing waters. The white building on the right is a schoolhouse.

State police, physicians and Red Cross workers are working to aid the homeless.

HEAVY RAIL DAMAGE.
The Central Vermont Railroad will be cut off from service for at least a month. Its rails are twisted and torn, many of them having been carried a quarter of a mile by the swift running flood waters.

The Montpelier Junction station, on the direct line of the route to Boston and New York City, is completely wrecked.

TRAILY FEET OF WATER.
Twenty feet of water is running through many streets. The City Hall is ruined as are several hotels and stores.

Barre, six miles from Montpelier, still is under water and they have been less of life there also.

REF CROSS STALLED.
There are 7,500 homeless persons in Montpelier now or virtually the entire population. Some of them have come to homes on the hills while others are sheltered in public buildings which remain standing.

Fifty homes were lifted entirely from their foundations and their debris is scattered about the streets.

Hills outside the town are covered with debris, including beds, lumber, railroad ties, and parts of streets and roads.

The Red Cross from Boston is stranded in White River Junction and is trying to get through to high water to Montpelier. They will not be able to do so before tomorrow.

His next honor was his election as State's attorney for Washington County, and some two years later he was elected to the Legislature from Barre. Two years later he was elected to the Legislature from Barre. Two years later he was elected to the Legislature from Barre.

He served in this capacity for six years, resigning in 1912 in order to give his full attention to the law.

Lieutenant-Governor Jackson was elected and the father of two sons. He made his home in Barre, where he was a member of the Barre, Vermont, and spent much of his leisure time at his summer camp at Windsor Farm.

His candidacy for Lieutenant-Governor was hard fought, but victorious, and according to all political indications, he was well on the road to the Governorship.

The Lieutenant-Governor was a man of fine physique and great athletic and youthful looking. He was a member of the Vermont Athletic Club and was a member of the Public Service Commission, succeeding to the former body by Governor George H. Proulx.

He served in this capacity for six years, resigning in 1912 in order to give his full attention to the law.

Five Brothers
All Won Success

Lieutenant-Governor S. Hollister Jackson was the fourth in a line of five celebrated "Jackson Brothers" of the Green Mountains State. He was born, as were his brothers, in Canada, and received his early college training at the University of Toronto where he received the degree of Bachelor of Music.

The parents of the five good brothers were the Rev. Samuel Nelson and Mary Ann Parkin Jackson. When the parents went to Vermont in 1855, they made their home in Barre, and Rev. Mr. Jackson was pastor of the Congregational Church there for six years.

The Lieutenant-Governor, a skilled pianist, played the organ in his father's church, and on four mornings a week played also in the chapel of the University at Burlington.

He continued his arts course in the University of Vermont for a time, and then took up the study of law in the office of the late John V. Gordon at Barre. Young Jackson was admitted to the bar, and two years later, was made a Grand Juror of Barre.

His next honor was his election as State's attorney for Washington County, and some two years later he was elected to the Legislature from Barre. Two years later he was elected to the Legislature from Barre.

The Lieutenant-Governor was a man of fine physique and great athletic and youthful looking. He was a member of the Vermont Athletic Club and was a member of the Public Service Commission, succeeding to the former body by Governor George H. Proulx.

He served in this capacity for six years, resigning in 1912 in order to give his full attention to the law.

Lieutenant-Governor Jackson was elected and the father of two sons. He made his home in Barre, where he was a member of the Barre, Vermont, and spent much of his leisure time at his summer camp at Windsor Farm.

His candidacy for Lieutenant-Governor was hard fought, but victorious, and according to all political indications, he was well on the road to the Governorship.

from the spot where he had disappeared from his automobile.

Five Brothers
All Won Success

Lieutenant-Governor S. Hollister Jackson was the fourth in a line of five celebrated "Jackson Brothers" of the Green Mountains State. He was born, as were his brothers, in Canada, and received his early college training at the University of Toronto where he received the degree of Bachelor of Music.

The parents of the five good brothers were the Rev. Samuel Nelson and Mary Ann Parkin Jackson. When the parents went to Vermont in 1855, they made their home in Barre, and Rev. Mr. Jackson was pastor of the Congregational Church there for six years.

The Lieutenant-Governor, a skilled pianist, played the organ in his father's church, and on four mornings a week played also in the chapel of the University at Burlington.

He continued his arts course in the University of Vermont for a time, and then took up the study of law in the office of the late John V. Gordon at Barre. Young Jackson was admitted to the bar, and two years later, was made a Grand Juror of Barre.

His next honor was his election as State's attorney for Washington County, and some two years later he was elected to the Legislature from Barre. Two years later he was elected to the Legislature from Barre.

He served in this capacity for six years, resigning in 1912 in order to give his full attention to the law.

N. E. TO BE INCLUDED IN BIG FEDERAL FLOOD RELIEF PLAN

Water's Devastation Puts This Section In Class With Mississippi River Basin, Says Chairman Reid on Eve of Congress Committee Hearings—Can Get Aid if Requested, Is Belief

Washington, Nov. 5 (A.P.)—EVEN before the flood waters of New England have subsided, that stricken section has taken its place alongside the Mississippi Valley in the plans of Congress.

Yesterday, here today prepared to open hearings by the House Flood Control Committee on Monday, Chairman Reid found the Federal government throwing its full force into rescue work through the War Department and he promised immediately that the work of drafting necessary flood legislation would be expedited to include New England should such a course be requested.

The chairman declared the flood disaster in the Mississippi River basin, emphasized the necessity for action by Congress of a nationwide policy for flood control.

He also said that in order to obtain a safe, practical and permanent solution of the flood control problem he had requested scientific assistance and the American Society of Civil Engineers to appoint one or more of its members to join with the House committee and army engineers in the work.

The chairman said the committee would meet Monday at 2 p. m., when he expected a large delegation headed by Mayor Thompson of Chicago to present a request that Congress expedite a flood relief program as quickly as possible.

In addition to the Chicago delegation, Reid said he expected delegations from virtually every State

in the Mississippi basin area would be present before the hearings were opened.

He conferred today with Attorney General Sargent regarding legal barriers that would be in the way if Congress desires to change the policy of Federal aid to States.

He said continued.

"Under proposed ideas for flood control the government will take over all control and pay the cost, while doing so that will supersede all State rights, and at the present time there is no law authorizing the Federal government to take over control of land and activities within the States. It may be necessary to have joint action of all the States involved should Congress determine upon this policy."

The Attorney General said he would take this under consideration and would assist one of his assistants to work with the committee.

"I regret very much to hear of the floods in Vermont, but it only serves to emphasize the need for a comprehensive flood policy of nationwide scope. The flood relief committee will be glad to consider the New England problem with the other work should it be so requested."

Boat Replaces Trains Out of Burlington, Vt.

Montpelier, Vt. Nov. 5 (A.P.)—The steamer Chataqua, operated on Lake Champlain during the summer by the Delaware & Hudson Railroad, went back into service today between Burlington, Vt. and Port Kent, N. Y., replacing train service.

N. E. COUNCIL AND RADIO TO WAFT BURNED BOY'S PLEA TO GRANDFATHER AT SEA

Elizabeth's Hospital, little Albert Burrow, nine, last night called out for his grandfather, his grandfather, to come to the bedside. His name is on the danger list with serious burns.

But the grandfather, Charles King, one of the crew of the fishing vessel Princess, was far out at sea. The vessel, which left 7 Wharf last Tuesday, carries no wireless so the small boy's plea could not be heard.

Albert, who lived with his parents at No. 13 Western Avenue, Alton, was playing with fallen leaves near his home yesterday. He found some kerosene and started a bonfire. But the blazing oil fell on his clothes and he soon was a torch of flames.

A passing motorist wrapped the little fellow in an auto robe, quenched the flames, and rushed him to the hospital. Although a vessel bearing his grandfather has no radio, Albert's plea will be broadcast today in the hope that some other ship may pick it up and transmit it to the Princess.

ARLINGTON LEGION AT CHURCH TODAY

Members of Arlington Post American Legion, and its women's auxiliary will attend Armistice Sunday services today at First Parish Unitarian Church, Arlington.

Rev. John Wood Mark, pastor of the church and chaplain of the Legion Post, will preach on "The Spiritual Aspects of Peace."

FORD RUSSIA'S IDEA OF LEADER, SAYS HUB MAN

Industry Main Soviet Interest,
McDonald Tells Foreign
Policy Association

Homesick Russian children won't stay in orphanages because they hate soap and bread and butter, but love dirt and cake.

This was quoted from a Russian leader by James G. McDonald yesterday at a meeting of the Foreign Policy Association at the Copsey Place. It was the first luncheon meeting of that organization for the season. Other speakers were Prof. Stanley D. Hudson of Harvard Law School and Mrs. Roland C. Hopkins, chairman of the association, who presided.

Mr. McDonald, chairman of the national executive board of the organization, visited Russia last summer. The general subject of the meeting was "Rural Centers in World Politics." "Ford, Hudson, who has just returned from a year's leave of absence, which he spent in travel abroad, spoke upon conditions of Europe, North Africa, the Near and the Far East and the Pacific.

FORD THEIR IDEA OF LEADER.

Mr. McDonald declared the Communist Party in Russia, comprising 2,000,000 members, was the present revolutionary, and that it controlled, and would probably continue to control, the 140,000,000 of other inhabitants because it relatively satisfied the peasants and the workers. Both these statements were made in response to questions from the floor, which followed the address.

The Russian ideal of a leader today, said he, "is not a Wilson or a Coolidge, but a Ford. The great interest is not politics, but industry." In reply to a question he expressed belief that Russia had not yet given up her attempt to Bolshevize China.

Nor, he believes, have the Communist Party and the Third International relinquished their ideal of a world revolution. Questioned from the floor as to the extent of Communist propaganda supported by Soviet money in the United States, he replied:

ACTION VS. COMMUNISM.

"I believe that not so much money is going out of Russia as is reported. As one Communist leader said to me, referring to the United States, you can't make Communist propaganda against 35,000,000 automobiles."

Prof. Hudson said it would surprise him if Turkey were elected to membership in the League of Nations next Autumn. The League was "disrespectfully" in Syria, where he visited this country. He referred to the Philippines as America's great aviation center, declaring that after his visit there he "remains firm in the belief that the Philippines should be independent."

Walpole-Keene Road Scooped Out by Nature's Hand

CRUMBLING away as though a huge hand had descended upon it, this ruined portion of the highway blocked motor traffic between Walpole and Keene, N. H.

SEAPLANE DARTS 313 MILES AN HR.

Venice, Nov. 5.—(U.S.A.)—Major Mario de Bernardi, winner of the Schneider cup, ran this year, averaged 472 kilometers and 575 miles, or 294 miles and 1,469 miles an hour, which in itself is a world record, over a two-mile lap. At times the aviator attained a speed of 313 miles and 529 yards. The flight was made over the Schneider cup course.

Vaccine Sent to Bay State Flood Area

As a measure of precaution, George H. Bigelow, State health commissioner, yesterday dispatched typhoid vaccine to the western Massachusetts flood area.

Enough vaccine to care for 1,000 cases was sent westward. It was feared by State health authorities that typhoid fever would break out from improper water supply.

BOULEVARD IN METHUEN CLOSED

Lawrence, Nov. 5.—Because of an overflow from the Merrimack River that has inundated the Lawrence Lowell boulevard, Methuen police last night closed that artery to traffic. At some point the roadway is buried to a depth of two and a half feet.

Water from the river backed up into a small brook that crossed the boulevard at Methuen. Motor traffic was diverted to the old North Lowell road, but as the same brook crosses that artery it is feared all means of vehicular communication between the city and Lowell will be destroyed.

Sargent Hears Family Safe in Vermont Flood

Washington, Nov. 5 (U.S.A.)—ATTY. GEN. SARGENT received word from Vermont today that members of his family are safe, although the town of Underwater where they live is under water and has virtually been abandoned by the inhabitants, who fled to the hills.

MILLIONS LOSS BY B. & A. LINES

While no exact estimate of the damage done Boston & Albany lines by the Connecticut valley floods could be given last night, officials of the road declared that it would run well into the millions.

According to the railroad officials, the situation at Rock and Chester and in the vicinity of Westford is one of the most tragic in the history of western Massachusetts. They expressed the fear that Rock and Chester and other towns would be cut off from railroad communication for two weeks, if not longer.

"Conditions along the eastern slope of the Berkshire are worse than one can imagine. It is most discouraging and there does not seem to be a cheering element in the whole situation."

Such was the statement made by Boston & Albany executives, who further declared that it was not only a case of bent and twisted bridges and flooded roadbeds, but wiping out of tracks, roadbeds and culverts for miles.

The same official said three hundred were sent while four miles of track leading to Twin Lakes have vanished. The bridges which were sent away spanned the Westford River at various points in the vicinity of Chester and Rock.

Service between Springfield and Putnam will be impossible for the next week or ten days. Service from Springfield to Albany and West will require a detour of 175 miles, with a loss of time of about five hours.

Residents complain that land in the Westford section is being subjected to the same damage as passenger trains. It is hoped by railroad officials that by Monday there will be alternative routes marked out to take care of local freight and passenger traffic.

Carmen to Nominate
Candidates for office will be nominated tomorrow evening at Boston Street Carmen Union at Lottier Hall, Tremont Temple.

B. & M. OPENS WAY TO HUDSON GATE

Re-establishing both freight and passenger service between Boston and the Hudson River gateway, the Boston & Maine Railroad last night began moving milk and other perishables which had accumulated there since the floods broke lines of communication Thursday, according to a statement by road officials.

Indirect routing of trains and the use of motor buses served to restore considerable of the railroad service. Fifty passenger cars on the Maine Express were carried by motor coach to the terminus at the Lakeview & Hudson railroad which late yesterday reopened its Montreal route.

Overcoming its banks at Garvin's Falls, N. H., the Merrimack River prevented Boston trains reaching Concord, N. H., and motor bus and street car service were resorted to. Meantime the Connecticut River, subsiding somewhat in the greater flood sections, reached new heights at Holyoke and it is M. tracks there which late yesterday reopened its Montreal route.

Some of New Haven's Branch Lines Cut Off

New Haven officials announced that make line through trains were practically on schedule yesterday, with Boston-New York trains curtailed on time.

The road is taking Boston & Albany Railroad trains from Springfield to the West, detouring those that city to Most Haven, on the west shore of the Hudson River, to Albany, N. Y., as was done the day previous.

HUB WOMAN HURT BY TOWED CAR IN LYNN

Mannamoth St. Boston was struck by an automobile at 10:40 a.m. on Monday, Nov. 5, when Mrs. Morris Walker, 59, of 59 Church street, Chelsea, was driving a car towing another. Mrs. Walker's attention was called to the tow car as it was being towed by the tow car and was run over by the tow car.

HOPPE NEED NOT PAY FINE \$1,310

161 Devonshire Street, Boston
Morgan's, Inc. October 27, 1927.
Boston, Mass.

Gentlemen:
In reference to the bankrupt stock of the Ideal Upholstering Company which you purchased at auction and paid for spot cash, I write you to state that we understand clearly that this merchandise is to be sold brand new, up-to-the-minute and finished merchandise. I congratulate you on this purchase, knowing, as I do, the actual original manufacturing cost on this stock. The exceptional and very substantial savings you made on this purchase should enable you to offer to your customers some very wonderful bargains. Shipments to your warehouse are to start at once. Very truly yours,
HARRY COHN

Pemigewasset Valley Reported Laid in Ruin by Water

Ruin Wrought by Onrushing Flood in Heart of North Adams

HUNTER BRINGS TALE OF HAVOC OUT OF DELUGE

Dead Livestock Dam Streams and Settlements Are Menaced by Pollution Now

HORNTON PROVES HAVEN

Scores of Refugees From New Hampshire River Find Suitor in High Land Town

By Universal Service
Manchester, N. H., Nov. 5.—The Pemigewasset valley, which has been the scene of a deluge of water since the morning of Nov. 3, is now a vast, featureless plain. The water has reached a depth of 10 to 15 feet in many places, and has completely destroyed the crops and the settlements in the valley. The water has also killed many of the livestock, and has dammed up the streams, threatening the settlements in the high land towns. The water has also polluted the streams, and the settlements are now in danger of being completely destroyed.

MUCH STOCK DEAD

Homes have been killed and the livestock is now in danger of being completely destroyed.

The water has also killed many of the livestock, and has dammed up the streams, threatening the settlements in the high land towns. The water has also polluted the streams, and the settlements are now in danger of being completely destroyed.

HELD IN \$37,000 R.R. THEFT PLOT

With the argument in Montreal Court yesterday of John McFarlane, charged with the theft of a locomotive, the case of the theft of a locomotive from the Montreal and North Shore Railway Company during the past year was argued. The case was argued by the Montreal and North Shore Railway Company, and the case was argued by the Montreal and North Shore Railway Company.

Fat Stops X-Rays

Chicago, Nov. 5.—Mrs. P. H. Haver is so fat that it was found impossible to take an X-ray photo of her body.

WRECKAGE of homes tossed about North Adams buried the centre of the city under tons of debris. Automobiles stalled in the path of the flood had to be left to the wrath of the angry torrents. The tangled timbers that once formed fifteen homes are strewn about this scene at Union and Eagle streets.

CALLS DISASTER 'EXAGGERATED'

Flood conditions in Vermont were described as "exaggerated" by a local official. The official stated that the flood conditions were not as bad as they were reported to be, and that the damage was not as extensive as it was claimed to be.

AUTO LICENSES OF 3, FREED IN COURT REVOKED

Goodwin Decides Despite Ruling of East Boston Judge

REGARDS THEM AS UNFIT

2 Involved in Accidents, Says Registrar, and Third Called Tipsy Driver

Three American citizens, the most famous of them East Boston men, who had been driving their cars in this city, were today told by the registrar that they were unfit to drive. The registrar, who is in charge of the motor vehicle department, today decided that the three men were unfit to drive because of their involvement in accidents. The first man, who was involved in an accident, was told that he was unfit to drive. The second man, who was involved in an accident, was also told that he was unfit to drive. The third man, who was called a tipsy driver, was told that he was unfit to drive.

Wanted! 25,000 Sufferers from DEAFNESS

Head Noises from Ear Tubal Catarrh—or Nasal Catarrh Only

Startling Free Offer!

This announcement is being published in order to secure the names of 25,000 people who are suffering from catarrhal deafness, dullness of hearing, head noises or ordinary nasal catarrh. To everyone so afflicted, a wonderful trial treatment, originated by Dr. W. O. Coffee, for many years a nationally known specialist, will be sent to try without obligation or expense.

Dr. Coffee, himself, suffered for many years from ear tubal catarrh, deafness and head noises. He tried many different treatments which failed to give permanent relief. Then he began experimenting on himself and finally developed a method which completely healed his ear tubal catarrh, restored his hearing and stopped the distressing head noises.

You can test this remarkable treatment, originated by the doctor and since then used with such astounding success by thousands of people afflicted with these troubles. Coupon brings free trial without the slightest cost. Mail it today. You incur no obligation whatever.

W. O. COFFEE, M. D.
Originator of This Home Treatment

Don't Neglect These Troubles!

Deafness, Ear Tubal Catarrh, Head Noises, and Nasal Catarrh generally grow worse when neglected. Authorities claim that ninety per cent of all deafness is primarily caused by catarrh of the head and air passages. Others state that nasal catarrh often causes indigestion, rheumatism, catarrh of the stomach, and many other diseased conditions. If you suffer from dullness of hearing or nasal catarrh, do not neglect this condition.

There are thousands, who are now practically stone deaf, whose hearing could no doubt have been saved had the right measures been taken in time. Dr. Coffee restored hearing in hundreds of cases, where the patients were so deaf they could hear nothing. Of course, those were cases which, in spite of their severity, fortunately had not advanced to the stage that the actual tissues or nerves had become affected. Just remember this—you can prove the value of this treatment entirely without risk or expense. It will come to you absolutely free. Just fill out and mail the coupon.

25,000 Trial Treatments Given This Month

Naturally, the doctor was proud of the results reported by so many thousands of sufferers who have used his simple home treatment. It is because of this success that these 25,000 demonstration treatments are being prepared and sent absolutely free to all who answer this offer within the next 30 days. This liberal plan should convince you that Dr. Coffee's Original Home Treatment will give you relief from catarrhal deafness, dullness of hearing, head noises and also nasal catarrh. The results are quick and convincing. You feel the difference the first day. Try it. This treatment costs you nothing whatever. Simply send coupon or write and say you are suffering from deafness or head noises or catarrh. You will receive a free treatment which Dr. Coffee always claimed was the best treatment he ever found in his 45 years' practice as a specialist. Every sufferer should take advantage of this offer. The demonstration treatment is FREE.

With Mrs. Reed Page, of N. Y. Dr. Coffee's hearing treatment quickly relieved a serious and chronic developing case of deafness and head noises. From normal hearing in scarcely four years, Mrs. Reed became afflicted with severe head noises which she writes, "People had to stand them, how she writes, 'I am happy to tell you that my hearing is now normal, and my head noises are gone.'"

Head Noises Disappear

With Mrs. Reed Page, of N. Y. Dr. Coffee's hearing treatment quickly relieved a serious and chronic developing case of deafness and head noises. From normal hearing in scarcely four years, Mrs. Reed became afflicted with severe head noises which she writes, "People had to stand them, how she writes, 'I am happy to tell you that my hearing is now normal, and my head noises are gone.'"

After 10 Years' Suffering

After 10 years' suffering from deafness and head noises, Mrs. Reed Page writes, "I am happy to tell you that my hearing is now normal, and my head noises are gone." This is the only person in the world who has been cured of deafness and head noises after 10 years' suffering.

Relieved After 48 Years

After 48 years' suffering from deafness and head noises, Mrs. Reed Page writes, "I am happy to tell you that my hearing is now normal, and my head noises are gone." This is the only person in the world who has been cured of deafness and head noises after 48 years' suffering.

Acute Deafness Soon Ended

The remarkable case and story of the recovery of Mrs. Reed Page, of N. Y., is a story of the cure of acute deafness and head noises. From normal hearing in scarcely four years, Mrs. Reed became afflicted with severe head noises which she writes, "People had to stand them, how she writes, 'I am happy to tell you that my hearing is now normal, and my head noises are gone.'"

Restored Hearing in Month

After 10 years' suffering from deafness and head noises, Mrs. Reed Page writes, "I am happy to tell you that my hearing is now normal, and my head noises are gone." This is the only person in the world who has been cured of deafness and head noises after 10 years' suffering.

Profit by the Experience of Hundreds Who Praise this Original Method

Read This Glowing Tribute

Mrs. Reed Page, of N. Y., writes, "I am happy to tell you that my hearing is now normal, and my head noises are gone." This is the only person in the world who has been cured of deafness and head noises after 10 years' suffering.

her deafness was so pronounced that it handicapped her in all her business transactions. She had to be helped in all her correspondence. She had to be helped in all her correspondence. She had to be helped in all her correspondence.

An Obedientian's Praise

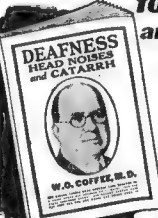

After 10 years' suffering from deafness and head noises, Mrs. Reed Page writes, "I am happy to tell you that my hearing is now normal, and my head noises are gone." This is the only person in the world who has been cured of deafness and head noises after 10 years' suffering.

Greatly Benefited at 86

After 86 years' suffering from deafness and head noises, Mrs. Reed Page writes, "I am happy to tell you that my hearing is now normal, and my head noises are gone." This is the only person in the world who has been cured of deafness and head noises after 86 years' suffering.

DONT SEND ONE PENNY

Mail Coupon Today for This Book and Treatment

You will be keenly interested in Dr. Coffee's Book on Deafness. In plain, simple language it describes the symptoms of the many various types of deafness. From reading it, you should be able to determine something of the nature of your own trouble. Bear in mind, Dr. Coffee's treatment is not recommended for those who are totally deaf from disease of any kind, from shock, or, in fact, from any cause whatever. In fact, this book frankly states so. Mail coupon today and get the Free Book and Treatment without obligation or cost. Offer is limited—Act!

You are not asked to send one penny for this treatment. It is sent free to you prepaid without cost. This is done to quickly introduce Dr. Coffee's original home treatment to sufferers from deafness, or head noises caused by ear tubal catarrh, or from nasal catarrh itself. Dr. Coffee probably treated more cases of deafness, head noises and catarrh than any physician in the United States. He considered this treatment the best he ever found in over 45 years active practice. The fact that it cleared his own case and restored his hearing to normal, after the condition had grown really acute, gave him absolute confidence in it. Then, too, he witnessed what it has done for hundreds of sufferers. Send your name and address today. State whether you have catarrhal deafness or head noises or just have nasal catarrh. This notice may not appear again so mail the coupon at once.

DR. W. O. COFFEE, CO.
365 St. James Hotel Bldg., Des Moines, Iowa.

Please send me your Free Trial Treatment, and your Free Book on "Deafness, Head Noises and Catarrh," both by prepaid parcel post. It is understood that this does not obligate me in any way. (Either print your name and address or write plainly.)

15 LINERS WILL SAIL IN CUNARD CRUISE PROGRAM

Almost Every Maritime Country in World to Be Visited by Line's Ships

Fifteen ships will sail on the Cunard Line's new cruise program, which will visit almost every important maritime country in the world with the exception of Australia, which was visited in 1926 last year.

There will be two "around the world" cruises. The first, the *Mauretania*, will sail on January 1, and the second, the *Queen Mary*, will sail on January 15. Both ships will visit the West Indies, Central America, the Caribbean, the Gulf of Mexico, the Panama Canal, the Pacific, the Philippines, Japan, Australia, and the South Atlantic.

Savannah Line Announces New Hub Sailings

ANNOUNCEMENT is made by the Ocean Steamship Company of Savannah of its new sailing schedule from Boston. The dates of sailing now will be Monday, Wednesday and Saturday.

The new schedule allows stopovers in New York for passengers. Copies of the new sailing schedule may be obtained upon application to the Boston American Advertising and Travel Bureau, Boston.

ISSUES BOOKLET OF SEA CRUISES

There are a great many other people who would like to see the world, but who are unable to do so because of lack of money. The *Sea Cruises* booklet, issued by the American Travel Bureau, gives a list of the ships and the routes of the various sea cruises. It also gives the names of the agents and the prices of the cruises.

New Orleans Events

Almost every day in New Orleans there is some event of interest. The *New Orleans Events* booklet, issued by the American Travel Bureau, gives a list of the events and the dates of the events. It also gives the names of the agents and the prices of the events.

Mammoth New Office Building Planned for Broad Street

UNIQUE COLOR SCHEME SHOWN FOR EXTERIOR

Will Be Fourteen Stories In Height and Second Largest in the City

Design is now to have its first showing of the so-called one type of architecture. The building will be known as the Battersby Building and is to be financed by the Woodstock Trust of Boston.

It is expected that the building under the direction of the Turner Construction Company as general contractor, will be completed and ready for occupancy about November 2, 1928.

The new structure, covering the entire block bounded by Broad, Franklin and Battersby streets, will be the largest office building in the downtown district, and the largest in the city.

It is said that the architect, who is still in the early stages of his plans, has a very unusual and original scheme for the exterior of the building.

While colored buildings are not uncommon in the city, the first time that a building of this type will be erected. In order that the general public may appreciate the scheme, the architect has decided to use a color scheme that is not only pleasing to the eye, but also practical.

Color also will be used in the interior of the building. The architect has decided to use a color scheme that is not only pleasing to the eye, but also practical.

While the building is not yet started, the architect has decided to use a color scheme that is not only pleasing to the eye, but also practical.

Color also will be used in the interior of the building. The architect has decided to use a color scheme that is not only pleasing to the eye, but also practical.

While the building is not yet started, the architect has decided to use a color scheme that is not only pleasing to the eye, but also practical.

Projects Being Carried Forward

PROPOSED office building to be erected at Battersby, Broad and Franklin streets. When completed, it will be one of the largest buildings in Boston. The total cost, with land, is estimated at more than \$2,000,000.

HIDEOUS MONGOLIAN BRUTALITY

Copyright, 1927 by New York Artists Co., Inc.

Woman Sentenced to Death by Starvation.

One of the Local "Gods."

Lama in Chains in a Mongolian Prison.

THE pictures on this page are from photographs taken by representatives of the National Geographic Society and printed in that society's admirable educational publication.

You shudder as you look at the picture of an unfortunate Mongolian woman condemned to die of slow starvation, your imagination tells you how horrible that death must be.

The box is too small for sitting, standing or lying down. There is in the side a hole big enough for the victim to put out her head and arm. When the photograph was taken the poor creature was picking vainly at the lock with her feeble hand. It is a comfort to know that she is now beyond the reach of "justice."

Let your mind supply the details of such a death, the long minutes, hours, days and nights, with hunger and thirst and bodily pain increasing.

No doubt the dying woman was tormented by children, or jeered at by adults, ignorance being always on the side of the strong against the weak, ready to throw stones or hard words, as our ancestors did at victims in the New England "stocks," or to help the executioners in their work of torture in Europe's Dark Ages.

You remember how the little child innocently brought a piece of wood and added it to the bonfire when John Huss was burned alive for his religious opinions.

These pictures are not published, needless to say, to arouse sympathy or gratify any morbid interest in that which is shocking.

They are published to remind you that Asia today, in some parts at least, is as brutal, as horribly cruel as Europe was five hundred years ago.

These pictures are published, with a reproduction of one of the "gods" that the torturers worship, to remind you that men's religion shows what they are, and that no man or civilization is any better than the kind of "god" that he worships as his ideal.

A brutal god of many hands and many heads, many passions and hatreds, with petty vanities demanding base Oriental flattery, is the sort of god that would be worshipped by the cruel, the servile, the brutal.

The particular crime of which this particular condemned woman was found guilty is not known. It may have been such a crime as would cause our laws to inflict the barbarous sentence of capital punishment. For we are still barbarians to that extent, although we no longer kill by torture.

Or the miserable woman may have been

To look at and study these three pictures is to study the human race as it exists now in Asia, and as it once existed everywhere, horribly, coldly cruel.

The "legal" killing of a woman by starvation, in one picture, the heavy chains riveted on a prisoner's neck, in another picture, are explained partly by the heathen god, the sort of "divinity" worshipped where these tortures are inflicted.

These pictures are a warning. They should make us realize what Asiatic victory over Europe would mean. And they remind us of our own brutalities past and present.

guilty of some offence that in civilized countries would call only for a reprimand. She may have been lacking in respect and subsequently impertinent to some high dignitary. She may have offended the notions of some pagan priest devoted to the god whose picture you see here. She may have neglected in some way her duty to that god.

She may simply have refused to tell what she knew of another's evil deed.

Whatever the cause, here you see the poor creature in such misery and suffering as is hardly conceivable.

And seeing this picture you realize what barbarism exists at the top, in the system of "justice" now existing in Mongolia and other parts of Asia, and you realize what it would mean if the dregs of that Asiatic population, fully armed, were turned loose in Europe as a result of the white people's stupid murdering and weakening of each other.

The man prisoner is a Lama, one of the Thibetan worshippers and servants of the brand of Buddhism that Mongolians have developed.

You have heard of prisoners in chains, but a chain of THIS kind is new to the American imagination. It would hold a dozen oxen. One single link is big enough to go around the man's neck. There it is riveted. To be photographed the poor creature stood up, holding the heavy weight as best he could. The greater part of the day and night he lies flat, to keep the weight of the chain from his neck.

The photographs from which these pictures were made were taken in Mongolia, a vast, wild territory belonging to the Chinese Empire. It runs for three hundred miles along the outer side of the great Chinese Wall, occupying an enormous region on the great plateau of East Asia.

On this vast territory live about five million Mongols. They raise cattle, migrate from one place to another, or live in settled places carrying on agriculture where the Chinese have taught them. They use a hundred thousand

camels and three hundred thousand ox carts in transporting tea and in other transportation.

From this and other Asiatic regions, through the centuries, have poured millions of invaders, savage, cruel and bloody, dashing into Europe, only to spend their power, leave some of their blood behind, and disappear again.

Who knows that these invasions have ENDED for all time?

Who can say that the hordes that once came on ponies, on foot, on camels and with oxen, cutting food from the living animals as they drove them on, may not COME AGAIN, and this time in flying machines more swiftly?

This picture is printed to make you realize that there are many strange places, savage peoples, DANGEROUS SURVIVALS, upon this earth which you inhabit.

It is not a planet made up of land carefully marked out, carefully mortgaged, with streets, lamp posts, policemen, justices of the peace, chambers of commerce and local real estate booms everywhere.

There are fifteen hundred million human beings on the earth, and among them more than a thousand millions are black or yellow.

There are hundreds of millions so deep in savagery that they scarcely count. It is all that they can do to fight each other, the climate, wild animals and starvation.

There are others in Asia as brutal and cruel as were the white men of the Dark Ages in Europe. Those Asiatics are powerful in their capacity for work and endurance, unlimited in their power to stand pain and hardship. They have intelligent, keen leaders, or they MAY have—yellow men that have proved themselves the equal of the whites in science and in development.

The white races of Europe and of America have something to learn when they look at a picture such as the one on this page.

They see the horrible cruelty that punishes remorselessly.

They see, most ingeniously introduced by

Mr. McCay in his drawing, a figure of one of the gods that the Asiatics worship.

Here is a god of laughter, of fire, sword and hideousness.

You can imagine what his followers would like, and what they would DO.

Finally, as you look at this picture, the poor woman putting her finger in the lock and struggling against fate, you think of the dreadful suffering that has been inflicted upon human beings on this earth for ages. You wonder what it is all FOR, what final good can possibly atone for it and justify it.

Thousands upon thousands of millions have lived in injustice, want and fear, and died prematurely in agony. The mind asks, WHAT FOR?

Why all these false gods and false religions? Why all these savage human beings murdering each other, poisonous snakes, ferocious animals, hideous diseases, terrible tortures?

Was it all inevitable, or, as has been suggested, are there perhaps in the universe SICK PLANETS, just as there are in a nation SICK INDIVIDUALS, exceptions, to be pitied, perhaps cured, perhaps buried.

To look back over history is to see a few men of power driving the thousands to murder each other.

It is to see famine destroying the mothers and the children, and skipping the great that brought on the famine and who feed themselves carefully while famine rages.

You see men fighting against cold, wild beasts and wilder human enemies, and millions driven to death under the lash that a few might live in vicious luxury.

Even now on the earth such things exist as McCay shows you in his picture.

And in the places called civilized, in our own country, out of a hundred millions you have ninety millions leading monotonous lives, knowing as little about the real earth, having as small a share of real knowledge as some animal in the menagerie, confined to its little cage.

It is a puzzling condition under which we live, with our worries very real, our sufferings acute, cunning and brutality often victorious, and the human race depending for its consolation chiefly on HOPE AND FAITH.

However, such wisdom and power as we see displayed in the guiding of the sun, the balancing of the universe, the unflinching seasons, the power that keeps us in our little earthly hothouse sailing through the dreadful cold of the ether, makes us realize in the end that justice rules and will be obeyed—that progress can come only as birth does, through pain and suffering, and that the end will justify the means, preface.

FORTY-SECOND COUSINS :-

Getting on Into
Cold Weather

:- By J. W. McGurk

WHEN PEOPLE GET CROSS:
"IF YOU'LL REMEMBER, OLD BOY, I
WASN'T SO KEEN ABOUT MARRIAGE. YOU
PROPOSED TO ME SIX TIMES."
"YES, I KNOW—THEN I CAN OUT OF
LUCK."

"DID MR. ORTSPEY SHOW
YOU A GOOD TIME WHEN HE
TOOK YOU TO DINNER LAST
NIGHT?"
"I'LL SAY HE DID
—GEE! I'M NOT
HUNGRY YET!"

"DID YOU KNOW THAT
IT'S MY GRANDSON WHO
HAS THE JOB OF OFFICE
BOY IN YOUR OFFICE, MR.
UGMAY?"
"WELL, WELL, THAT IS
FUNNY—HE WENT TO YOUR
FUNERAL LAST WEDNESDAY."

"OH DEAR I WISH I
HAD A JOB, A REGULAR
STEADY JOB."
"LIKE WHAT?"
"LIKE BRIDESMAID TO
ONE OF THOSE FILM
QUEENS IN HOLLYWOOD."

"I WANT SOME
LEGAL ADVICE ABOUT
MY HUSBAND, PLEASE.
HE LEFT ME FLAT
EIGHTEEN YEARS
AGO AND I HAVEN'T
SEEN HIM SINCE—HOW DO
I GO ABOUT GETTING A
SEPARATION?"

"YOUR HUSBAND IS A PRETTY
SICK MAN, MRS. PANCAKE, IN FACT
I DOUBT IF HE'LL EVER BE ABLE
TO WORK AGAIN."
"I'LL GO AND TELL HIM, DOCTOR,
IT'LL CHEER HIM UP."

© 1927 S. N. Y. AMERICAN INC.

BORE: "Yes, I don't know how
it is, but I feel thoroughly
sore up today."
Hester: "Don't worry. And
if you don't mind, I'll
give you a hand, I am mar-
ried as well."

Do men, like that schoolgirl
"squeal" in" asks a wife. Yes,
as long as it is in the shoulder
and not in the heart.

First Cousin: Why are you
here?"
Second Cousin: Because I
live in a city.

Stars are like a woman
on their night. They are seen on
the night. No doubt, on moon
lit nights the couple who usually
cheer one's view in the movies
go for a walk instead.

A woman married her husband
at last, the squeak in the rear of
her car which has been bothering
her for weeks. It was her husband
asked her to please drive a little
slower.

"I can tell me how
to be a man."
"Yes, but how
to be a woman?"

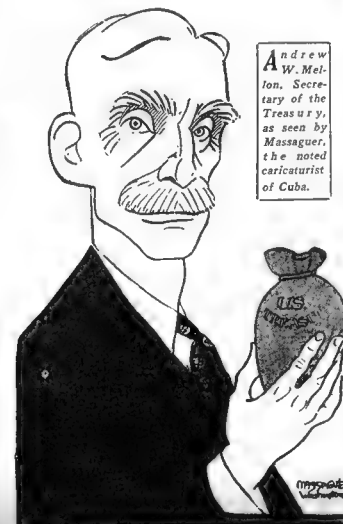

ADY: My husband says this
kind of heads doesn't suit
me, so I'll change
my hair. I'll do it
in a different way.
The hair king: Give you a
dread.

'BORAH'S DRY CHALLENGE TO G. O. P. WILL PROVE FUTILE'

During 1918 we applied ourselves to the separation of the church from the government organism, into which it had been woven during many centuries.

'HOW ITALY IS MOBILIZING HER ARMY': MITCHELL

Huge Italian Plan Developed to Carry Seventy People Across Atlantic and Hurl Tons of Explosives

By GEN. WILLIAM MITCHELL

Former Assistant Chief of the U. S. Army Air Service and Commander of U. S. Air Force in Europe During the World War.

GRREAT as has been the transformation in all of the governmental departments, none has been more successful than the air ministry established by Mussolini, which has put Italian aeronautics in the forefront of the great powers.

Shortly after the war, the air ministry in Italy so permeated the aviation service that nothing was done. What airplanes there were allowed to stand in the hangars with no attention whatever until many of the hangars fell and destroyed them. Other planes were broken up.

At that time aviation was under the army and navy, and naturally their only interest in it was to use it as a small auxiliary for their own work.

Italy's air force was too weak to conduct an independent air war. This year, however, it has more than 1000 aircraft. It is the first time in the history of the world that a country has been able to develop its own air force in the south was supposed to carry the war into the enemy's territory.

These aircraft are not only used for the purpose of attacking the enemy's territory, but also for the purpose of attacking the enemy's air force. This is the first time in the history of the world that a country has been able to develop its own air force in the south was supposed to carry the war into the enemy's territory.

PENN DEFEATS HARVARD BY 24-0 SCORE

Dartmouth 19; Brown 7; Yale 30; Maryland 6; B.U. by 33-6; Villanova Beats B.C. 13 to 7; Tufts 39-0; Notre Dame Tied

SLICING HAMM. Hamm, Dartmouth, being stopped on Brown 30-yard line in second period of yesterday's game with Brown at Providence.

PENN HAS THE BALL on the 30-yard-line. American Telephone and Telegraph Co. telephotograph from Philadelphia to International Newsreel.

LOOKING BACK ON A GAIN. In one of the most remarkable action football pictures of the season, Staff Photographer Scanlon caught the above play in the Brockton-Fitchburg game at Brockton yesterday. A Brockton player has just been tackled by a Fitchburg back, who is seen almost standing on his head. The Brockton player, evidently a bit surprised by this spectacular tackle, is shown looking back over the few yards he managed to gain before being brought down. Fitchburg kept its slate clean by defeating the Shoe City eleven by the score of 7 to 0.

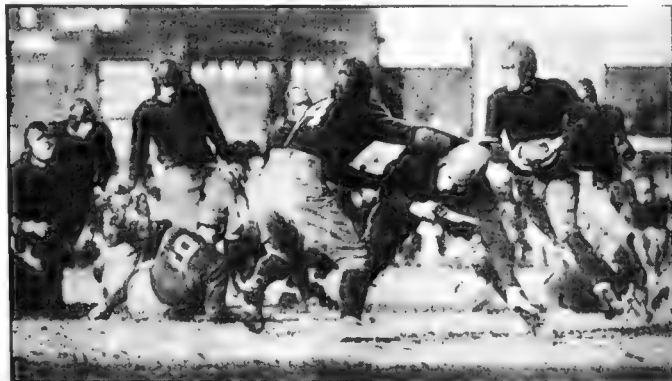

END OF THE LANE PASS. Marsters, Dartmouth, No. 25, just after receiving long pass from Lane.

All staff photos

BROWN OF HARVARD, at extreme right, kicking from midfield in game which Penn won, 24 to 0. This photograph was sent by the American Telephone and Telegraph Company to International Newsreel by telephotograph.

PLUCKING THE EAGLE. Villanova snatched a 13 to 7 victory from Boston College at Braves Field yesterday in the last few minutes of play. McAndrew, Villanova, is shown about to bore through for ten yards, while perfect interference paves the way.

VILLANOVA STOPS EAGLES' VICTORY FLIGHT

GILLESPIE STARS FOR INVADERS

Murphy Blocks Punt to Give Heights Team Its Lone Touchdown

By JOHN R. GILL 10013.

A lone runner, bearing down on a pile-up of two or three players, for passing, straight ahead, in the line of scrimmage, the Villanova football team, in its first game, defeated the Eagles, 14 to 0, at the Field yesterday. When the teams met on the field, the Villanova players, in their blue and white uniforms, were met by the Eagles, in their red and white uniforms, on the field.

The Villanova team, under the leadership of Coach J. J. Moran, played a very smart game, and the Eagles, under the leadership of Coach J. J. Moran, played a very smart game. The Villanova team, under the leadership of Coach J. J. Moran, played a very smart game, and the Eagles, under the leadership of Coach J. J. Moran, played a very smart game.

CAPT. OBIGLI HURT

It was a very smart game, and the Eagles, under the leadership of Coach J. J. Moran, played a very smart game. The Villanova team, under the leadership of Coach J. J. Moran, played a very smart game, and the Eagles, under the leadership of Coach J. J. Moran, played a very smart game.

JORDAN, STERLING HALFBACK of the Villanova eleven, is pictured here making a gain through the B. C. line in the second period of yesterday's game at Braves Field. This exceptional photo was taken by C. S. Moore, staff photographer

BROOKLINE'S TILT 7-7 TIE

An evenly matched contest, Brookline's football team, under the leadership of Coach J. J. Moran, played a very smart game, and the Eagles, under the leadership of Coach J. J. Moran, played a very smart game. The Brookline team, under the leadership of Coach J. J. Moran, played a very smart game, and the Eagles, under the leadership of Coach J. J. Moran, played a very smart game.

ARMY BURIES F. & M., 45 TO 0

Chicago paid \$123,000 for a rookie player from the Coast. The player was expected to be a major addition to the team. The payment was a record for a rookie player.

Jack Dempsey's Boxing News

JACK (DOO) KEARNS has once more popped into the pugilistic picture as manager of a great fighter. The man who piloted Jack Dempsey to the world's heavyweight championship is directing the Mickey Walker ballyhoo. He is the driving power behind the surge that has carried Walker from the ranks of the also rans to the middleweight championship and to a point where he is the leading contender for the light-heavyweight crown.

A few months later Kearns announced Walker was signed to battle Tiger Flowers in Chicago. Mickey received the decision, though most of the fans were of the opinion Flowers had the margin. Kearns then looked around for a new novelty. He couldn't get any better of an ordinary title bout, so he asked Walker to defend the middleweight crown against Tommy Milligan in England. Mickey was guaranteed \$100,000, which set a new figure for a middleweight match at that time.

When Kearns came sailing home with his champion he looked around for new worlds to conquer. He saw the redoubt Mike McTigue on the scene and decided to challenge the ad Dempsey. That was the one fought the former champion by Kearns. When Mike saw Kearns said that by next summer Walker will be big enough to fight Dempsey.

RINDGE BEATS STONEHAM

Rindge beats Stoneham in a football game. The game was played in a hard-fought battle, with Rindge's offense dominating the game. The victory was a significant one for Rindge, who had been struggling in recent games.

WILLY GEESSE ARE FINALLY ON THE MOVE, AND AFTER A SCANT FEW OF THEM HAVE DRIFTED INTO THIS SECTION, BEFORE LONG REAL FIGURES OF THEM MIGHT BE SEEN. A LONG AGO WINGED HIS SOLITARY WAY INTO GREAT POOL, WYOMING, EARLY LAST WEEK AND WAS PROMPTLY KNOCKED OFF, THE FIRST OF THE SEASON IN WHICH UNUSUAL WINDS HAVE BEEN THE CAUSE.

Ducks and Geese May Right By

Owners who have been visiting their favorite shooting spots along the coastline and in the inland ponds all have the same story to tell of an unprecedented scarcity of birds. All that have been taken are mostly native ducks and a very few flint birds from the States.

Hammond's 90-Yard Run Wins for Harbortide

Hammond's 90-yard run won the game for Harbortide. The game was played in a hard-fought battle, with Hammond's offense dominating the game. The victory was a significant one for Harbortide, who had been struggling in recent games.

Wesleyan Harriers

Wesleyan Harriers were the focus of the week. They were a team of athletes who were competing in various events. They were expected to perform well in the upcoming season.

KOLSTER RADIO

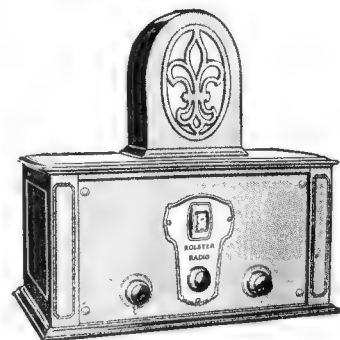

Every big-time tackle is on the air today! And you will
never know how close a radio set can come to "showing"
you a football game until you hear the roar of the rooters
over Kolster!

What you want out of a radio set is exactly what goes
into the microphone. Nothing more. Nothing less.
Every time and any time and any station.

That's the value Kolster offers you at the utmost min-
imum of price. Value supreme in any type of set you
demand!

And this is why most new Kolster sets are being sold to
the man who lives next door to the man who has a Kolster
set already. And is keeping it because he can't beat it!

Compare values. Then . . . you . . . will . . . buy . . .
Kolster.

for example: this is the
KOLSTER
\$89.50 six-
tube model. Even if you are thinking of paying half as
much again for a set don't do it without comparing it
with this. You never will believe it till you hear it. Uses
indoor or outdoor antenna. Reasonable time payments
if desired.

Kolster models range in price from \$89.50 to \$375.
There is also the Kolster Power Cone Speaker at \$175.

Motor Leaders seek Transcontinental Roads

HUD MOTORISTS INTERESTED IN ROAD BILL

Need for a Transcontinental Highway Emphasized by Motor Leaders

HARD SURFACE WANTED

Provisions for the Necessary Width, Belt Lines and Crossing of Viaducts Discussed

BOSTON motor groups are showing an active interest in the holiday bill, for the construction and maintenance of transcontinental highways. The feeling is expressed that lack of such arteries is one of the big barriers to expanded motor travel today.

Leaders in this movement discuss the present system of transcontinental travel as inadequate and unimprovement. The need of a transcontinental highway is discussed in view of the growth of motor travel.

The holiday bill, which is under discussion, provides for the construction and maintenance by the Federal government of a nation-wide system of hard-surfaced roads. The bill proposes that the roads be built as soon as possible and wide enough to take care of needs for the present and the future. It also can be determined the highway would be built as soon as possible and wide enough to take care of needs for the present and the future.

Convenient Connections

Provisions call for the building of belt lines, and connecting lines to avoid heavy traffic. It is desired, and for highway and viaducts at railroad grade crossings.

The system as planned in the holiday bill would bring State capital and the National capital into convenient connection by direct, trunk hard-surfaced trunk roads, and link all sections of the country by modern, hard-surfaced roads.

It would be issued by the Federal government to meet the cost of a national trunk road system, and motor vehicles and motor fuel to carry out the provisions of the bill.

Construction would be started as far as possible simultaneously in all States. State roads already built would be utilized where properly paved, and the cost of such work returned to the States.

The bill provides that the Federal government maintain the system in first-class condition and prescribe regulations for the roads. Sponsors of the holiday bill point out that it will not repeal the Federal Aid Road Act, but supplement it, because the Federal aid act has not provided for adequate trans-

New Motor Chief

EDWIN H. RICHARDSON has been named manager of the new Commonwealth avenue branch store of Oakland Motor.

Continental highways of a hard-surfaced type. Among the motor leaders who saw a need for transcontinental highways is Major Paul Hines, secretary of the Boston Automobile Club, the Greater Boston division of the A. A. A., which annually solves the touring problem by its rule of transcontinental highways.

Necessary Width

"There should be a network of highways, and necessary trunk roads, after the method of rural roads, all over the country. For example, if a motorist wished to go from Boston to San Francisco, he should be able to follow a straight, unbroken, hard-surfaced route to the West.

There are four hard-surfaced cross-country roads, both East and West and North and South, with varying degrees of improvement from different sections would make it a still greater ease of travel.

Transcontinental highways should be wide enough to take care of future needs. The transcontinental motor road is not apparent to anyone else. It is a road that is not only in the mind of the motorist, but in the mind of the motorist.

Worries of Heat Loss in Cold Months

Netting on Italy's "Wall of Death" to Stop Suicides of the Lovelorn

ROME, Oct. 27. LOVELORN youths and maidens who wish to end it all no longer turn their steps toward the "Muro Torto," or crooked wall of Rome, which, for two centuries has been the favorite spot for those who had a rendezvous with death. Death hovered, actually and historically, over the 90-foot embankment of the famous Pincian Gardens. Even in ancient times the crooked wall had an evil reputation.

Recently the Governor of Rome decided to put an end to the melancholy fame of the wall. Accordingly, heavy baskets were fixed in the masonry, and on it was placed a wide metallic net, about a foot from the top. Thus, an unfortunate who fell over the wall is caught in the net before he has descended far.

In the old days Rome's "wall of the underworld," who were not allowed to be buried in consecrated ground, were buried at the foot of the wall. Some time before the netting of steel was placed on the wall to prevent further suicides, when the road was being dug up for the laying of new trolley lines, thousands of human bones were found, belonging to those unfortunate who in a period of 200 years it is estimated that more than a thousand men and

Engineers Have Electrified the Rail of the Isartel Bridge, in the Isar Valley, Germany, to Discourage Self-Destruction From This Spot, Which Was Highly Favored by Disappointed Lovers. The Voltage Is Not Sufficient to Kill.

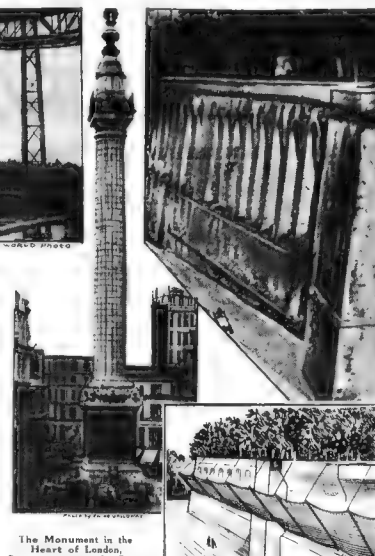

women killed the same way by leaping from the wall, an average of five suicides per year.

Of late years the Muro Torto has been more than usually popular with suicide. Strongest laws were enacted against the sale of poison. The Tiber had been polluted more than ever. But the wall was still accessible to those who wished for death.

In the most beautiful part of the valley is the Isartel Bridge, from which one may have a view of the fine scenery of wooded country, gleaming river and picturesque villages with thatched-roof houses.

For some unexplained reason, people on suicide bent, traveled miles to this lovely spot to kill themselves by leaping from the bridge to the river below. A week after the structure had been opened to public traffic two people had killed themselves by leaping from it, and from that time on the number of suicides kept on increasing steadily until it assumed the proportions of a public menace.

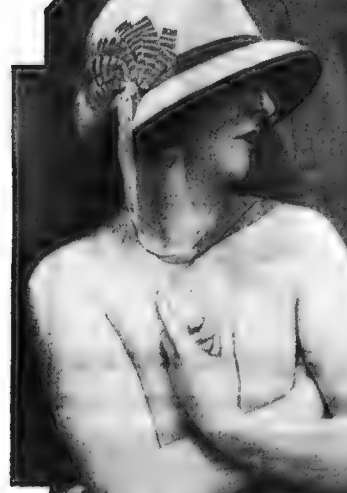

A peculiar time was noted. The people who lived in the neighborhood never used the bridge for committing suicide. It seemed to draw its victims from other parts of the country. Finally it became recognized as a menace, and armed guards were employed, whose sole duty it was to keep an eye on people who seemed to be loitering on the bridge too long. The guards did their best, but they failed to diminish the number of suicides from the Isartel Bridge. It took but a

The Monument in the Heart of London, Commemorating the Great Fire. The High Cage at the Top Was Put There to Prevent Suicides From Jumping Off.

How the Netting of the Roman Wall Has Been Arranged So That Those Who Attempt Fatale Leaps Will Land Unharmed and Then Be Taken Into Custody by the Police.

The Wall of the Pincian Gardens in Rome, Which Has Been Fitted With a Netting to Put an End to Romantic Suicides.

Miss Margaret Sousa, God-daughter of the Famous Bandmaster, Without Any Corset at All.

Artistic or Vulgar?

THE low cut corset and the liberal exposure of the back in feminine costumes, and the shortened skirts, have provoked many discussions as to where the tendency to expose more and still more of the feminine figure will end. It was during a discussion of the known hand-dancer, John Philip Sousa, asserted that she thought artistic skill might make it possible to indefinitely shorten the skirt length and considerably increase the corset line, both back and front. Miss Sousa asserted that she believed it entirely possible, for instance, to have a photograph taken with no clothing whatever above the waistline—and yet have it artistic, inspiring and not open to the charge of being vulgar.

And to demonstrate her argument Miss Sousa had herself photographed in the pose pictured on this page. How the reader agree with Miss Sousa that the pose is artistic.

Years ago American tourist who went to France came back with startling ac-

counts of how the French chorus girls appeared on the stages of their bodies exposed. They brought back with them photographs of some of the ensemble scenes, printed in the programmes of the revues, in proof of their statement, figuring that people here wouldn't believe such a thing could happen.

Yet, within recent years it has become no uncommon sight, in American revues, for girls to parade with such a paucity of attire as to be practically nude. In one show a couple of seasons ago a girl appeared in a scene dressed as Eve. She wore no clothing but a fig leaf. The producers of the show, in defense of the scene, declared that the body of the young woman in question conformed to all the laws of decency that the scene, therefore, was an artistic one.

This was followed by an epidemic of nudity which resulted finally in drastic laws being passed, laws which, for the first time in the history of New York theatre, make it possible to pulllock a theatre for nude displays.

Broadcasting Psychic Waves

THE most remarkable radio station in the world is Station PTIC, broadcast from Chicago under auspices of leading spiritualists. The station, which has its headquarters at No. 186 South Loomis street, has no power transmitters, and receiving sets tuning in to the waves of thought. On the night of a week PTIC transmits psychic waves only.

The story, and the promulgation of the station stick to it.

The Progressive Thinking Healing Center, the association operating the station, calls it Psychic Radio. They say it is a

modern phase of spiritualistic endeavor, in which a universal wave length attuned to the minds of disciples of mental healing is used. They broadcast at 7 p. m. every Monday, Wednesday and Saturday. The message usually being the reiteration of a health bringing thought, somewhat similar to the Cere formula. Those at the receiving end are supposed to tune in by concentrating.

Encouraged by the success of their experiment with psychic radio, the spiritualists in charge of PTIC announced that within a year they expected to be able to dial heaven upon their radio and receive in this way direct evidence of immortality.

Found—A Royal City Buried in The Black Jungle Of Ceylon

DIGGING and exploring on the site of the ancient city of Anuradhapura, in the north of Ceylon, archaeologists recently came upon an ancient dagaba, a solid dome built to enshrine a sacred relic. It was overgrown with rank vegetation, and although it reared its brick-built dome fifty feet higher than the spire of St. Paul's in London, the engulphing mass of the jungle would inevitably have claimed it had it not been saved by the exploring party.

Today, under repair by devoted Buddhists, it has been restored to the point where it resembles its former august glory, and upon the site where it was built the investigators are studying a relic of a royal city, but in the black jungle of Ceylon. Of what was once a metropolis, only the one decaying dome of the dagaba remains visible. Founded in 550 B. C., by Arayan invaders, the city was the living throne of the city for 1,500 years.

The rounded mass of bricks, called a dagaba, found on the site of Anuradhapura, is an institution that was born only after the diffusion of Buddhism. There are larger dagabas than the one found where once was Anuradhapura. During the ages when the cities of Ceylon lay desolate in the jungle, these rounded elevations were clothed with rank and scrub, like the rest of the ruins of temples, tanks, pavilions and other remains. Huge roots as thick as a man's thigh worked themselves insidiously in between the bricks and clamped themselves to the interior work, the overgrown figs sent down its octopus branch-roots and clutched the masonry in their grasp, so that when evidences of the cities were discovered and restoration began, it was found impossible to eradicate them altogether. Much has been cut away, but to entirely wrench out the

ruins, it is feared, might do considerable harm.

Such a catastrophe did occur, indeed, in the case of Ruwanwel, the most sacred of the Ceylon dagabas.

Anuradhapura was abandoned when it was invaded a thousand years ago by the Tamils from South India. Apart from temples and palaces, the most remarkable relic of the past is the sacred Ba Tree—a plant combining a cross of aspen and fig—and to be a seedling of that tree under a tree is the great blessing attained by the Buddhist. It is thought to be the most ancient tree in the world, and it is planned, according to records, to preserve it.

The site offers endless possibilities to archaeologists. Over the immense area are scattered ruins, any one of which may turn out on inspection to be a gem of sculpture or architecture. Pillars of granite with carved capitals stand in the jungle where the jungle has been cleared, and at almost any point the eye embraces a relic of the city, like little of well-known ruins.

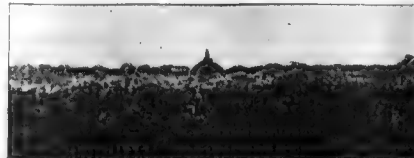

On the grounds, massive balustrades, enormous open air baths and a hundred other things of singular purity line and restrained ornament. The remains are practically all of granite, which is found in the neighborhood, with some limestone and brick.

The ancient city was enclosed by walls sixty-five miles long. The streets were laid out in straight lines; one at least, from gate to gate, was sixteen miles long. The dwelling houses have vanished completely. The kings adorned the temples and dagabas with bands of precious metals, there were statues of Buddha with eyes made of valuable jewels. The enormous dome of the Ruwanwel dagaba was once covered with red porphyry, into which were stuck thousands of flowers, until the monument looked like an enormous nosegay. One king laid an enormous carpet, eight miles long, from the sacred hill of Mahale to that of the city. Of this magnificence there are left only the dagabas, shrunken now in spite of

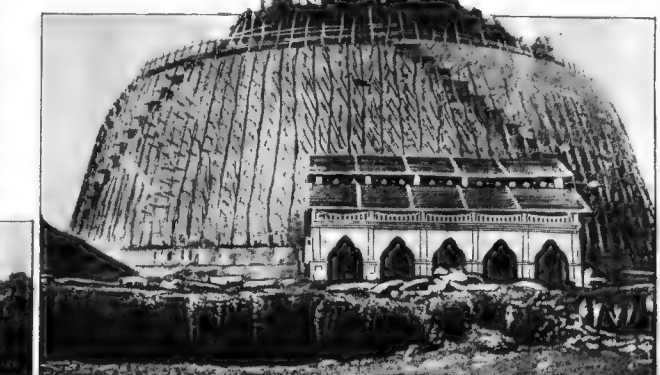

their excellent foundations, but still remarkable. Some hundreds of granite columns remain with altars and guard-houses. It is curious that no trace of any palace has

been discovered at Anuradhapura. But at Polonnaruwa there has been found the shell of the dwelling of an ancient king of Ceylon, identified without doubt as the

palace of Parakrama, made of brick with walls ten feet thick. Five months were devoted by archaeologists in clearing out the debris from this interesting ruin.

Only One Decaying Dome Rising Above the Dark Forest Marks the Spot of What Was Once a Metropolis.

An Ancient Dagaba, or Solid Dome, Built to Enshrine a Sacred Relic, Which Archaeologists Have Uncovered on the Site of the Royal City, Buried Away in the Ceylon Jungle.

Why Marion Benda, Folies Beauty, Can't Pay Her Debts

Broadway Bewildered at the Revelation of a Show Girl Who Doesn't Eat Lobster Suppers, Won't Drink Champagne, Has No Jewels Nor Rich Furs, No Limousine, Not Even a Maid—Who Really Tried to Live on Her Salary and Went Into Bankruptcy

Miss Benda on the Aeroplane Float in the Lindbergh Parade Last June, Where She Was Selected to Represent "The American Girl."

THE newspapers recently reported that Miss Marion Benda, the well-known "Folies" beauty, was going through bankruptcy.

Persons who know anything at all about the interesting manners and customs of show girls read that item with astonishment. It was improbable, almost impossible from so many angles that some of Broadway's wealthiest night club rounders immediately felt stirred to investigate.

One of these philanthropists, a well-known oil and steel millionaire, waking from his sleep of the past a little interested, read and reread it several times and reached for his telephone. After some preliminary questioning he learned Miss Benda's number and got that young person on the wire.

"Oh, yes," she said, "you are Sue's friend, aren't you?"

"I was," hastily explained the rich man, "but not any more. We haven't seen each other for a long time. In fact, I've been rather lonely of late."

"Then what do you want?"

Show girls' time is valuable, but this was real money talking, and it was not their custom to give it such a short answer. The man of millions would have liked to first tell her how much and how long he had been admiring her from a distance, but now he knew he had to get right down to business.

"I see by the papers," he said, "that you are having a little financial difficulty."

"Yes, I'm having a bankruptcy," she answered.

"Aw, you poor child—what a shame," came in tones of deep sympathy; and from the rich, sympathy in loving having but she said:

"Well, what about it?"

My! this girl was snippy. It made him stammer in his reply.

"Why—er—er—the paper said the amount you owe is only \$3,304. Of course that is a misprint."

"No, it's correct."

What? The millionaire was full of righteous indignation. "You don't mean to tell me that some piker let you go bankrupt for lack of that puffing little piece of change?"

"What do you mean—piker?" demanded Miss Benda.

"I mean that you have been wasting your sweetness on the desert air. Let me send over a check for that amount and you call off that two-cent bankruptcy. It's a disgrace to your profession."

"No, thank."

"Wait, wait," the millionaire pleaded. "Don't get me wrong. I just mentioned that figure because it's the first thing to take care of. You'll need lots more right away. I'll see you this afternoon, and we'll fix everything up."

You will not see me, and I don't want any loans. You are the fourth man to call up this morning with that sort of proposition. I never accepted anything from any man except three golf sticks. I live on my salary. Good-bye."

"Live on her salary—that's a hot one," growled this disappointed Broadway blades who had hoped for a momentary glimpse of a "Folies" girl in the heyday of her youth and beauty, for a mere \$3,000 a year.

But Broadway finally found out that Miss Benda was telling

them the truth, and that that was what was the matter with her.

"Sure, that's no lie," confided one of her former dressing room mates. "She lives on her salary, if you can call it living. And that's not the half of it. She hasn't any car, or maid, or jewels, or anything. She hates the night clubs, doesn't drink and won't let a good John do anything for her. Can you beat it?"

"Marion always went to chase home right after the show and go to sleep. She's always asking where she can find a quiet apartment. Ain't that the limit?"

"And what's worse, she doesn't like the stage, admits she can't act, and tells everybody she's overpaid. Can you imagine?"

Did anyone ever hear of such a funny kind of show girl? Most girls get on the stage only after years of scheming and hard work. Miss Benda wanted to be a salesperson in a department store, and tumbled into the theatre by mistake. Before she could correct that error they had promoted the unwilling actress to the famous "Folies," the height of ambition for thousands of pretty girls.

There she was "sitting pretty" in a position to have everything show-ered on her from fur coats to diamonds, and would take nothing but three golf sticks. She could have picked a nice, rich husband, but married a poor one—the same man who had put her under obligation with the golf clubs. She didn't even know that, because on the way home from the marriage ceremony the bride ran away and left him.

So now, instead of being a wealthy husband for divorce and alimony, as was show girls do, her poor husband is suing her, and there are no profits for either of them. Miss Benda's entire career reveals exactly one habit in common with other show girls, and it is their only expensive one. She really does own a Fokno-dog, which she hopes will not be divided up among her creditors.

Most stage folk revel in noise. Quiet gives them the shivers, because it suggests "stuck" tones where show business is poor and actors are stranded. Miss Benda, hates noise. It has been the bane of her existence, and was truly the cause of her mokest bankruptcy. She was born in noisy New York city, but at an early age was sent to live with relatives in Norwalk, Conn., which is quiet enough.

But Marion's relatives were opera singers, and though in all other ways they were really in the world, they and their friends, who also are singers, kept the house vibrating with the powerful voices, morning, noon and night. A few years of this necessary cruelty made the girl's nerves ragged that she ran away to New York.

Marion's ambition was a nice steady job in a department store selling gloves or something, and a quiet room, a quiet house, where she could retire each day and get the regular nine hours sleep she needs. Real theatrical people need only six hours of sleep around curtain, and it takes a fire alarm to disturb them.

In the subway she heard a girl tell another that she might get a job with Lord & Taylor in Columbus Circle. When she heard that name of goods Mr. Wayburn sold, Marion went to Columbus Circle, saw a lot of girls streaming into a door and longed to go inside she learned to

Marion Benda in Stage Costume.

her dismay that it was for an act for the stage, which to her meant singing, music and all sorts of racket.

However, with a whole room full of pretty and experienced rivals, there seemed no danger of her being taken just as she was about to exit. In came Ned Wayburn and Ben Ali Haggen, who were putting on a tableau called "Simonetta." With almost no hesitation at all they picked her and one other girl out of the line-up.

Marion was scared, confessing that she had no experience, and didn't want stage work anyway. But they told her that one needs no experience for a tableau, and the next thing she knew she had signed a paper, found some money in her fist and was rehearsing in spite of herself. The act was named as she feared, and carried its own orchestra, of which the piece most annoying to the young actress was the bass drum. In Charleston she got square with it.

When they played that town, the orchestra was under the stage. Miss Benda, in making one of her exits, stepped through the wrong place in the velvet back drop and plunged head first

Miss Marion Benda, Distinguished Beauty and One of the Best-Known Show Girls of the New York Theatrical World, Who Has Appealed to the Bankruptcy Courts Because She Cannot Pay Her Bills.

down a steep flight of steps, at the bottom of which she had hit her bass drummer and his hated instrument.

There was no accident, however, as she dived through a hole in the circular-roller through a paper hoop. It broke her fall, but it ruined the drum and the drummer, too.

When the act closed Miss Benda looked for "her" work, and got the \$18 per week, deserting to the stores for a South Norwalk apartment.

Mr. Haggen, however, had told Mr. Zuehlke of this perfect face and was going to waste out in Connecticut, and he persuaded her against his coming to please accept a position in the "Folies."

"Because I can't act," she accepted it temporarily, while she looked around for that coveted department store job. Not content with trying to escape a disfigurement for which most women would give ten years of their lives, Marion refused a somewhat spiking part in "Loose the Prisoner."

When they asked why, she replied: "Because I can't act."

The two men looked at each other in awe, and the case of the "Folies" said: "I never expected to live to hear any woman admit that."

Right then her troubles began. It was not only dodging rich men with a "marriage complex" and others with an "anti-marriage" one, but she also had to find a quiet apartment. There was no money, parties above, below and on the sides, with singing, piano thumping and phonographs going till all hours.

She kept moving from one place to another until she was worn out that she had to stop work at the "Folies." After a rest, she signed a long lease on an apartment that was really and truly quiet and airy.

Then she did the smartest thing she could do in an eighth of a day and came out until she was a crazy. In the meantime Mr. Zuehlke had told Mr. Rudolph Valentino had promised her a picture work and guaranteed that she would get plenty of sleep in his hotel, if she really wanted it.

No she wanted to go to the Coast, but Valentino had decided to go to the Coast, but she was looking for a chance to break. She wasn't able to see the end of that New York apartment. It was a Hollywood one.

However, she met Mr. William Ware, a newspaper writer and expert, who liked him so much that he let him stay in his apartment. Unfortunately, it was just when Mr. Tunney took that famous fourteen-second fight, and the groom got all as nervous as a cat until the end of the fight. By the time she had changed

her mind and was on her way to New York.

But two landlords wanted their money, doctors who had treated her insomnia, a grocer who had supplied a "Folies" girl with a bill of \$115, and a photographer who let her have \$1,400 worth of pictures when she was in her room.

Not only a creditor or Fifth Avenue man wants the list of creditors.

Miss Benda had loaned \$750 to Miss Mary Sullivan and \$250 to Miss Doris. Her friends, who had loaned her money, were all in a state of panic, because they had no way to get their money back.

Miss Benda had no way to get their money back, and she was in a state of panic, because they had no way to get their money back.

Miss Benda had no way to get their money back, and she was in a state of panic, because they had no way to get their money back.

The Moon's Days Hot Enough to Cook Food—Nights Would Freeze the Ocean

Daybreak on the Moon, From an Observatory Photograph, Showing the Surface of the Moon at the Moment When It Becomes So Hot That an Egg Would Fry on the Rocks

THE most recent observations of the moon's surface have revealed some remarkable discoveries about its temperature. Those who are prone to complain about the weather on our own planet would be cured of any critical tendency if they were to be transported to the lunar belt for a short time. It has been calculated by a scientist studying the moon's surface that its rocks are hot enough by day to cook a meal on, and that the cold, as soon as the sun sets, becomes so intense that it would freeze an ocean, if the moon had one.

During the lunar night the surface of the moon is far colder than any temperature experienced on earth; it may sink to 300 or 350 degrees below zero. During the day the rocks on the moon's sur-

face are far hotter than the sands of any earthly desert.

Astronomers have long suspected of extreme alternation of daylight and night days on the moon. It is a consequence of the fact that the moon possesses practically no atmosphere. The air alone that keeps the earth from freezing at night and heating in the day is lost during the lunar day. The up-curtain of the atmosphere is turned to earth, so that observations are possible in the lunar day. The eclipse occurred on Jan. 15, 1927.

The great astronomical observatory at Mount Wilson, California, possesses a long-distance thermometer in the form of a ray of light which is directed at the face of one of the large tele-

View of the Frozen Surface of the Moon by Earth-light, as Reconstructed From Telescopic Photographs.

view the Moon would appear to an inhabitant by night. An Astronomical Model of the Surface of the Earth's Satellite, on Which, Immediately After Sundown, Everything Freezes, Although by Day Water Would Reach a Boiling Point.

During the recent eclipse of the moon two of the astronomers at Mount Wilson, Dr. Edison Pettit and Dr. Seth

an exceedingly sensitive detector of heat rays. Before the eclipse began, the surface of the moon was in sunlight. Its rocks were heated and were emitting heat rays, like the rays which can be felt coming from a hot stove. These rays the disk in the telescope picked up and measured. From the figures obtained Dr. Pettit and Dr. Nicholson were able to calculate the temperature of the moon's surface at that moment.

The measurement showed a temperature of about 170 degrees, Fahrenheit; a point perhaps even hotter than that to which an ordinary earthly thermometer would rise if laid on the rock surface of the moon in the sunlight.

Within a few minutes after the moon's temperature was taken in this way the

shadow of the earth began to fall on the moon, causing the eclipse. When the moon had been completely darkened by this shadow the Mount Wilson astronomers took the lunar temperature once more, still using their long-distance thermometer. A remarkable change had occurred. During those few minutes of shadow the moon's rocks, deprived of the warming sunlight, had cooled off far below freezing. The metal disk now indicated a moon temperature of nearly 190 degrees below zero, a fall of 360 degrees caused entirely by the eclipse.

Is Beauty Only a Matter of Geography?

It has been established that beauty is a relative matter. The dashing belles of one race are ridiculous in the eyes of another. The winner of an American beauty contest would look droll to a Fiji islander, and the most seductive charms among the Padang women of Burma, who wear eight-inch brass coil collars on their necks, look like circus freaks in our eyes.

But it has been assumed that there is a consensus as far as beauty ideals are concerned among civilized people; certainly among kindred races. This is not so, if one is to judge from national reactions. Some embarrassing situations have attended such differences of opinion, which seem to rise out of nothing more than geography.

This has been strikingly exemplified in Hollywood, America's capital of the film world. The great industry, the paramount commodity in Hollywood is beauty. Before the appraising cameras of the Hollywood movie hits there have paraded the beauties of all nations. Scores of women have wended their way from the far corners of the earth, to Hollywood, as pilgrims go to Mecca. In their own lands they were esteemed as great beauties. Hollywood turned them down.

Many belles of Italy, France, England, Spain and other European countries have come to California with high hopes and returned to their native lands crestfallen and disappointed, and telling tales of worst favoritism. But it is not favoritism. By a tacit unanimity, each nation seems to arrive at a certain type or standard of beauty, and any deviation from that type is considered, rightly or wrongly, to be faulty.

There have been notable exceptions, of course. Honee Adore, Alla Nazimova, Raquel Meller, Nita Naldi, Lya de Putti—all these and a few more have been accepted in this country as beauties of the type favored by Americans.

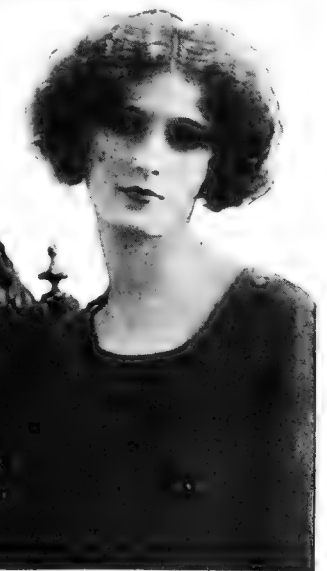

This queer example of geographical standards of beauty was illustrated recently by the experiences of two European actresses, Iris Bradford, of

London, and Nathalie Kovenko, of Moscow. Miss Kovenko, considered the most beautiful actress in Russia, decided on a tour, and her first engagement outside of Russia was at Rome. The Italians gave her a reception which amounted to an ovation. She fulfilled their idea of beauty. The Italian critics repeated the complimentary phrases that Kovenko had been getting for years from the Russian critics. Greatly encouraged by her success, she went to London, and was much disappointed to find that her appearance there created little more than a polite ripple.

London wasn't a bit impressed. The advance press notices from Rome meant nothing. She just wasn't the type, as far as London was concerned. London was a good deal more interested in, and loyal to her own beautiful Iris Bradford, considered as one of the most handsome women in England.

A short time later, Miss Bradford paid a visit to Rome, and appeared at one of the theatres there. The most beautiful actress in England created no more interest in Rome than the most beautiful actress in Russia aroused in London.

These examples might be multiplied a hundred-fold, and there seems to be no explanation for the difference of opinion, other than that it is purely geographical.

Miss Iris Bradford, Designated as the Perfect English Type of Beauty, Whose Appearances Outside Her Country Met the Same Fate as Those of Miss Kovenko in England.

Miss Nathalie Kovenko, Considered the Most Beautiful Russian Actress, but Who Found Only a Lukewarm Reception in England.

Baby Tapir Joins Zoo

THE newest arrival at the London Zoo is a baby tapir, son of Mr. and Mrs. Tapir, of Malay, in the South Seas. In its infant stage it is attracting the major attention of the crowds. Even the grown-up tapirs are odd-looking creatures. Strange as it may seem, they are related on the one hand to the rhinoceros, and on the other to the horse. The general form of the body may be described as pig-like; the head, too, suggests that animal. But the pig's snout is, in the tapir, a shorter proboscis, or trunk. The feet are those of a rhinoceros, on a much smaller scale, of course. The forefeet have four toes each, the hindfeet three, all of which are encased in large horse-like hoofs. The tail is a mere stump.

Tapirs are shy and inoffensive creatures, living in the seclusion of dense forests in the neighborhood of water, in which element they are quite at home. They are also fond of wallowing in mud, partly, it is believed, to cover themselves with it as a protection against the

annoyance of flies. They feed on shoots of trees, bushes, leaves and fallen fruits. There are five different species of tapirs. Their geographical distribution is remarkable, four species being South American, one Malayan, except the Malayan tapir, of which the London Zoo now boasts a new specimen, tapirs are black or dark brown. The Malayan tapir is black and white. The young, however, are spotted and striped with white or fawn-color on a dark ground.

That the tapir is a comparatively unknown animal is partly accounted for by the fact that it is little sought after by the big game hunter. From the sportsman's viewpoint it offers little thrill. By nature the tapir is a harmless and inoffensive animal, fleeing even before the smallest dog. Only in the case of females ferocity and courage.

In their native lands the tapirs are hunted for their thick hides, which are cut into tunics for bridle and reins. The flesh, also, is edible, and in some places considered as much of a delicacy as pork.

The New Baby at London's Zoo—A Malayan Tapir—Under the Watchful Eyes of Its Proud Mother.

Industrial Gas From Water

THE term watered stock has always meant stock of doubtful value. But science is discovering endless new industrial uses for the fluid known as "Adam's Ale," and under certain conditions water stock may be considered as valuable as any other commodity. Large fortunes have already been made from water, and in the near future its possibilities will be greatly increased.

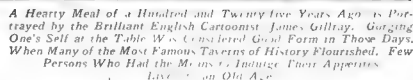

Industrial experts in England have been at work for some time perfecting processes whereby water is turned into gas. The process is comparatively simple. The water is passed over heated coke in specially constructed furnaces and thus decomposed into its elements, hydrogen and oxygen, the latter combining with carbon. The result is a gas more valuable than coal gas for heating purposes. It has not yet been developed to a point where it may be used for lighting purposes, but the experts say it will follow in time.

Water may also be made into a disinfectant. To do this ordinary common salt is dissolved in the water, after which the solution is submitted to electrolysis, specially constructed electrodes being employed. Sodium hypochlorite is thus formed, and dissolves in the remaining water. Much of the water is decomposed

during the passage of the current, and hydrogen gas, which is valuable in solidifying fat in the preparation of margarine, is produced as a by-product. Air is used, in combination with water, to make nitric acid. To do this air is carefully freed from carbon dioxide by pumping it over lime or through caustic soda solution. It then comes into a chamber through which a powerful alternating current is passed between two electrodes and spread out by electro magnets. A mixture of oxide of nitrogen results, and on passing this into water, a mixture of nitrous and nitric acid is obtained, due to the combination of the oxides with water. Subsequently the lower acid is oxidized to the higher one, and after this the nitric acid is concentrated in the specially devised apparatus until the required strength is obtained.

There still persists a theory that gold may some day be mined from the sea. It has been demonstrated that this can be done, but hitherto it has been an expensive process that it has never been regarded as commercially practical. Scientists, however, have not been discouraged in their experiments along these lines, and the day may come when the most precious of metals may be dredged from the sea instead of mined from the earth.

*The Blood, Which Is a
Sewer as Well as a
Nutrition Supply, Becomes
Saturated With Food
and Is Unable to Carry
Away the Poisonous
Wastes of the Body*

The Notorious Daniel Lambert, the Champion Fat Man of England, Who Was a Contemporary of the Well-Known Epicure, Brillat-Savarin. In That Era of Gross Over-eating, Obesity Was Looked Upon as a Mark of Distinction.

The red color of blood is not due to this fluid, but to the tiny solid particles, or corpuscles. These objects are so small that some three thousand of them must be laid down side by side to make an inch. In a tiny drop of blood large enough to make a spot an eighth of an inch in diameter on a handkerchief there are under 5,000,000 of these corpuscles. Under a powerful microscope the individual corpuscles can be seen; physicians count and measure them as one of the tests for health and for disease. Each of the corpuscles is red and that is what gives the color to the blood. There are also the white corpuscles, much smaller in size than the red ones, and as the red corpuscles die they are replaced by new ones of their own. And so the

Of the substances dissolved in this normally complicated fluid that flows in the veins of every animal being, the chemists call "proteins."

These proteins make up most of the solid matter of the blood, the building material called "protoplasm," that marvelous material which forms the living bodies of the tiniest germ as well as the largest animal. The blood of all men and animals are built, contains proteins. Seven to eight per cent. of the protein is extra fluid, called "human blood," undoubtedly, contains many different kinds of proteins, for chemists already know of hundreds of different types.

In the blood fluid, together with these proteins, are common salt, compounds of sodium and phosphorus, calcium, sodium like Epsom salts, salts of lime, a small amount of sugar, a tiny trace of iodine, probably a little of the rare and

And Now They Claim There Never Really Was a Columbus

LONDON, Oct. 28.—It has become the habit of late to die card color classes when owing the great figure of the past. Historic character and the high presentation of the man and of all the virtues and of the lack of the common faults of mankind, have been latterly revealed in less noble if more human character. Among those who have suffered most in this regard is Christopher Columbus.

Modern historians have been plucking sedulously away at the character and reputation of Columbus, and the result has been a series of bold and caustic criticisms. The latest and most recent is by the French author and historian, who recently published "The Truth About Columbus," in which he has endeavored to show that the great explorer was a man of no account, a man of no account, a man of no account.

The book of M. A. D. is a very interesting and well-written work, but it is not a very good one. It is a very interesting and well-written work, but it is not a very good one. It is a very interesting and well-written work, but it is not a very good one.

The original transatlantic trip from the Old World to the new continent was made, it is asserted, by a Portuguese, one Salvador Goncalves, who was the person who was down in history as Columbus. So that, in true justice, America was really discovered by Columbus, despite the assertion that there never was really a Columbus.

The sum and substance of the remarkable claim of the Secular Journal is this: That Goncalves, under the name of

"Columbus Starts for India," the Striking Painting by R. Balaca, in Which the Explorer is Depicted as a Religious and Devout Man, Wholly Omit of Character With the Claims Based on the Documents Found in Portugal.

lugal, where he had lived for some years before he went to Spain. When he wished to lay his plans before the King of Portugal, the latter furnished him with a safe conduct, saying: "As you are subject to our justice for certain reasons, the present letter guarantees you against arrest during your visit."

It is hinted that the crime for which Columbus was "subject to our justice" was the murder of a young girl of noble birth. The girl's name was Beatriz Enríquez de Arana. He told her, "I have loved you for a long time, but unfortunately, I had a wife living in Lisbon from whom he was separated. His first wife was actually dead. Beatriz became the mother of his son Fernando. Immediately afterward he abandoned her and never saw her again."

Some unknown crime impeded the efforts of Columbus to find support in Portugal, where he had lived for some years before he went to Spain. When he wished to lay his plans before the King of Portugal, the latter furnished him with a safe conduct, saying: "As you are subject to our justice for certain reasons, the present letter guarantees you against arrest during your visit."

Found The Final Clues to the Fate of the Lost Spanish Caravan

LOOKING GLASS CREEK, one of the many inconspicuous little streams that empty into the Platte River, has suddenly sprung into the historical limelight, its

banks, near the town of Monroe, Nebraska, have been identified as the site of the massacre of Spanish explorers in 1570.

The recent discovery of an old Spanish map, which showed the route of the lost caravan, has led to the discovery of the site of the massacre.

Only one man of the sixty survived the massacre which is now believed to have taken place on Looking Glass Creek. In some manner his diary came into the hands of a Montezuma Indian, who brought it to the hands of a Montezuma Indian, who brought it to the hands of a Montezuma Indian.

Science Making Plants Grow By Turning on the Light

THE fantastic plan of doing away with the sun in the growing of plant life is rapidly nearing reality under experimentation by government scientists of the Bureau of Plant Industry at Washington.

It is within the range of likelihood that in the near future housekeepers may have fruits and vegetables at any season by merely turning on electric lights.

The Government experimenters have succeeded in making five vegetables in a season by manipulation of light. Winter plants were raised to bloom in summer and summer plants in winter.

It has been generally recognized that and moisture were the factors in plant growth. In fact, this is a mistake. It is the amount of light that is the most important factor.

These men took long-day plants and placed them in a house that was fitted with a series of 10-watt electric lights.

They began by turning on the lights at dawn and keeping them on until midnight. The plants began to grow and flower. They then turned the lights off at midnight and kept them off until dawn. The plants began to grow and flower.

They then turned the lights on again at dawn and kept them on until midnight. The plants began to grow and flower. They then turned the lights off at midnight and kept them off until dawn. The plants began to grow and flower.

They then turned the lights on again at dawn and kept them on until midnight. The plants began to grow and flower. They then turned the lights off at midnight and kept them off until dawn. The plants began to grow and flower.

Soy Beans. The Larger Plant Shows the Advantages of a Full Day Exposure Over the Ten Hours Allotted the Smaller Plant.

because the days were too short. It was this same way with the goldenrod, which regularly begins flowering in June, whereas without electric light no flowering stem was formed, even under an exposure of several months to short-day conditions. Spinach planted in the house provided with electric light on November 1 was in bloom in six weeks, while in the ordinary greenhouse the plants remained in the seedling stage throughout the winter.

These experiments have opened a wide field for study and experimentation. A correct interpretation of the effects of light upon plants will be a great aid in reaching a better understanding of the causes which limit the natural habitat of most plants, a problem which has been a difficult one to solve.

How Sir Archibald Managed to Keep Two Wives

Couldn't Get Rid of Lady Diana, the Wife He Didn't Like, So the Jolly British Baronet "Became a Mohammedan"—And That Fixed Him Up for at Least Four Wives

Lady Diana Hamilton, in Riding Costume at an English Country Fair.

SIR Charles Edward Archibald Watkin Hamilton, England's only Mohammedan baronet, has again stepped into the limelight! He has married his housekeeper!

Sir Archibald's matrimonial adventures and affairs of the heart—of which this curious mating is only one sample—would fill a book, only no one would publish it until the last policeman in the British force had died. But, of course, Sir Archibald tactfully became a Mohammedan, and Mahomet covers a multitude of romantic relationships.

He was still a respectable Christian gentleman, however, when he married Olga, the daughter of Rear Admiral Sir Adolphus Fitzgibbon, and granddaughter of the Duke of Cambridge, a direct relative of the Royal Family. Everyone thought so, at least, but Olga refused to continue to think it after they had been married a little while. Five years of Sir Archibald were more than enough for Olga, and not all the King's horses and all the King's men—who, it is said, were employed on the job at the request of the ducal family—could mend the broken marriage vows of the forgetful Sir Archibald, who was always absent-minded on the subject of wives.

Olga didn't want to be a widow, and she felt that another moment with Sir Archibald would result in just that, so she up and left him and married somebody else almost before he realized that the row was not a kiss-and-make-dinner affair.

This happened in 1902, when divorce was not so fashionable as it is now and Sir Archibald had severely heard of the Prophet who could have saved him such a lot of trouble by giving him a moral alibi, so that he really suffered some social inconvenience and several twinges of annoyance. Now Sir Charles Edward Archibald Watkin Hamilton was not the man to take annoyance calmly. And with another husband, and he had no one with whom he could attend formal functions at Court. It was especially irritating since they invariably met, belonging by birth and education to the same set, and Mr. Lane, Olga's second husband, seemed to Sir Archibald most unreasonably to take up a good deal of Olga's attention.

There was nothing for it, thought Sir Archibald, but to marry again. And so he chose Algorta, the beautiful sixteen-year-old daughter of a Hertfordshire squire. Algorta was a "diamond" because she rode horseback as well as any jockey in England and spent all her time following the hounds. The idea of living in London and the world of fashion appealed to the girl's imagination, and not even Sir Charles Edward Archibald Watkin Hamilton weighed against the romance of marrying a

The Merry Sir Archibald Hamilton, England's Only Moslem Baronet, Who Found a Convenient Way to Have Two Wives at the Same Time.

baronet and the attractions of town. So Diana became wife number two.

Sir Archibald, even then, was a Mohammedan by taste and temperament, if not by conviction. How much his two wives had to do with that, nobody can say definitely, perhaps. At all events, Sir Archibald found it inconvenient to adhere to the Christian ideal of marriage.

If his marriage to the granddaughter of the austere old Duke of Cambridge had been something of a farce, his second marriage (with Diana) proved on real tragedy, for his girl-wife was quickly disillusioned. She had entered into marriage with the handsome baronet believing that life was going to be a beautiful fairy-tale, and that the divorced gentleman was as chivalrous and noble as Prince Charming. Possibly, at sixteen, she had not the necessary philosophy to make the best of her life with him. The more sophisticated Olga Fitzgibbon and tried and failed. And so the youthful Lady Diana Hamilton sought excitement to drown her sorrows.

She gambled wildly and she drank so as to forget the frightful debts she was running up. Sir Archibald, descended from William Hamilton, one of the "Five Kentish Petticoaters" of history, was a rich man as well as an aristocrat. But nobody would have been rich enough to meet the extravagance of Diana!

Sir Archibald was disappointed that he had made another mistake in the selection of a wife. For a man who adored women he seemed destined by the perversity of Fate to live very unhappily with those he married. He was not, however, inconsolable.

A series of undignified quarrels at length led to separation. Beyond the fact good several thefts of the unhappy girl for whom he now had a wife whom he never saw any more to maintain, he was in exactly the same position as when he was first divorced. Nineteen-year-old Diana was going the pace so furiously that even Sir Archibald was shocked. The climax was reached, however, when he discovered that she had taken to shoplifting.

His obligation to the family name, if not affection, forced him to try to hush matters up, and it is said that he made good several thefts of the unhappy girl for whose faults he may have been in part responsible. But he was more than ever in need of consolation. And he soon found it.

He met Lilian Austin, the humble daughter of a builder in Selsey, the little town where his magnificent home, called,

Native Bullock Cart in Which a New Bride Is Brought Home to Be Added to a Mohammedan Household. Sir Archibald Installed His Newest Wife in His Home in England Without Any Touch of Oriental Picturesqueness.

The New Lady Hamilton, Who Was Acquired Under Sir Archibald's Profession of the Moslem Faith Which Allows up to Four Living Wives at the Same Time.

paradoxically enough, "Paisley Cottage," a stunted Lilian was beautiful. She was also good, and at first it seemed as though that couldn't be helped.

If English society had been scandalized when the Duke of Cambridge's granddaughter, his first wife, had been forced to seek a divorce, if it had been shocked when Lady Diana, his second wife, still a child in years though she was married, had been driven from home—it was startled when he installed as housekeeper in his home, pretty Lilian Austin!

Society matrons were so indignant that they looked right through poor Sir Archibald when they met him. Most of them did, that is. Those who didn't protested afterwards that "that young woman" is only a housekeeper and nothing more. But his position became exceedingly difficult when Diana was arrested in a fashionable store, filled with aristocratic customers, many of whom knew her, for stealing rings and other jewelry, and it was impossible to stop the police from pressing the case. Blue-blooded England watched with fascination the trial, which was the sensation of the day, culminating in the imprisonment of Lady Diana Hamilton as a common thief!

To add to his troubles, the law of England only allows a man to divorce his wife for one sin, and that particular sin had not been committed by Diana!

Lady Diana's imprisonment made it impossible to come to any arrangement with her. Altogether, what with one woman and another, Sir Archibald found that a Christian baronet's lot was not a happy one.

Then came an inspiration. Sir Archibald knew, though only slightly, Lord Headley, England's Moslem peer. They met one day, by chance, and the conversation turned to religion. To Sir Archibald's intense delight, he learned that the Prophet generally allowed four wives. Here, at least, was the solution of his problem. Lilian should be satisfied by receiving her "marriage lines," poor Diana's troubles would not be added to by the fresh burden of a divorce and he, harassed Sir Archibald, would have peace.

He would become England's only Moslem baronet. No sooner said than done. Sir Archibald boldly announced his conversion. He did not mention, however, that he had married under Moslem law after all, why make public the fact that he was the only titled Englishman to have, simultaneously, two wives? A Mohammedan divorce might later be required, and no one would ever know that either event had taken place. But he reckoned without Lilian. She did not

like the idea of Sir Archibald's conversion. However, Sir Archibald lay low and amassed himself quietly by collecting in the neighborhood by present of the harassed Sir Archibald with a second wife. "Paisley Cottage" was a curious household, what with its Muhammadan head, the baronet's daughter in charge, and two unaccounted-for but charming children running around.

However, Sir Archibald lay low and amassed himself quietly by collecting in the neighborhood by present of the harassed Sir Archibald with a second wife. "Paisley Cottage" was a curious household, what with its Muhammadan head, the baronet's daughter in charge, and two unaccounted-for but charming children running around. Now the baronet really did not mind. He had married the housekeeper! In an interview, he explained that he was late Hamilton had been his wife under Moslem law for fifteen years, and that now the only difference lay in the fact that she was his wife under the law of England. Someone he seemed unconvinced, and having heard that the wedding was entirely secret and thus a surprise to the entire country, the writers ranging up Lord Headley, a most interesting and picturesque figure. Tall, handsome and dignified, he is a Moslem peer, and a true believer in the Moslem faith.

"I am a trifle worried," confessed Lord Headley, "about that dear fellow, Sir Archibald. I am afraid that people will misunderstand his position, and that it will reflect on Islam! The Mohammedans are intensely moral people, thanks to

fact, she fooled them, for she really was a baronet, and, strange to say, of ample means as well as high connections. So the charge fell through, and naughty Sir Archibald's profits met only with pity or cynical smiles. The papers were full of lively sensational account of Sir Archibald's past and his present with the housekeeper, and the music-halls resounded with laughter at jokes made at his expense.

A popular song was composed, the chorus of which ran thus: "Did George take a miniature, or something else as well? Did pretty Lil find Archie a pill, and start in raising—"

Shortly after this fresh plunge on the part of Sir Archibald, a scandal, Diana did, for in book 11 of the "Paisley Cottage" she had told the truth and married the housekeeper!

In an interview, he explained that he was late Hamilton had been his wife under Moslem law for fifteen years, and that now the only difference lay in the fact that she was his wife under the law of England. Someone he seemed unconvinced, and having heard that the wedding was entirely secret and thus a surprise to the entire country, the writers ranging up Lord Headley, a most interesting and picturesque figure. Tall, handsome and dignified, he is a Moslem peer, and a true believer in the Moslem faith.

"I am a trifle worried," confessed Lord Headley, "about that dear fellow, Sir Archibald. I am afraid that people will misunderstand his position, and that it will reflect on Islam! The Mohammedans are intensely moral people, thanks to

to Mahomet, who allowed four wives, but no more! Had he married Miss Austin in the only firm law now beginning to be a step in all would have been well. But now—" he sighed. Then he

"I think that the Moslem faith is a trifle more than one wife. But the very rich sometimes have three or four. The world does not understand that Mahomet, by his edict of four wives and no more, put an end to the abuses that existed before his teachings. Previous to that, no sex morality of any kind was recognized. He was the greatest protector of women that the world has ever known."

"People believe that Mahomet said that women had no souls. But that is not true. The Prophet said 'Thou shalt find Paradise at the mother's feet.' He taught that women are the other halves of men. And in Mecca, where I journeyed, there is a large square enclosed for women in the Mosque where thousands of them worship!"

"I prefer Islam to Christianity," went on Lord Headley, "because there are no Moslem priests, and because there are no marriages to be believed. Mahomet taught a code of ethics, exactly similar to that of Christ, and, to be a good Mohammedan, one must be a good Christian. But that means separating the teachings of Christ himself from those of his disciples, and the Christian Church, in my mind, has but little relation to gentle Jesus."

The interviewer returned to the subject of Mohammedan marriage.

"A wedding cannot be solemnized," said Lord Headley, "without the man giving the woman a dowry, so that whatever may occur in the future, the woman is protected. Sometimes, mind, this works out, not only from the man's viewpoint, but, should he divorce his wife, although he may be in the wrong, he cannot claim any money back."

"I think that the Moslem faith is a trifle more than one wife. But the very rich sometimes have three or four. The world does not understand that Mahomet, by his edict of four wives and no more, put an end to the abuses that existed before his teachings. Previous to that, no sex morality of any kind was recognized. He was the greatest protector of women that the world has ever known."

"I am a trifle worried," confessed Lord Headley, "about that dear fellow, Sir Archibald. I am afraid that people will misunderstand his position, and that it will reflect on Islam! The Mohammedans are intensely moral people, thanks to

Science Unable to Explain the "Buried Alive" Exports of Magicians

In a Cataleptic State, His Body Rigid as If in Death, Hamid Bey Was Lowered Into the Six-Foot Grave.

His Face Covered With a Winding Sheet, the Earth Was Gently Sprinkled Over the Prostrate Form Until It Was Thinly Covered.

The Grave Diggers Then Rapidly Threw in the Earth and Heaped High the Grave.

After Three Hours, the Grave Was Opened and the Egyptian Fakir Lifted Out and Roused to Consciousness.

Experiments by the United States Bureau of Mines Demonstrating the Amount of Oxygen Necessary to Sustain Life Make It Impossible to Account for the Puzzling Performances of Fakirs

HOW is it possible for a human being to be buried alive in a grave and to emerge unharmed? This is the question which has puzzled the most brilliant minds of the modern world. The late Harry Houdini, master magician, declared such a performance to be impossible, and to prove his assertion, pointed himself, in a cataleptic state, into the earth. He was buried in a six-foot grave, and after three hours he was lifted out and roused to consciousness. This feat, which has been repeated by other magicians, is a puzzle to the scientific world. The United States Bureau of Mines has conducted experiments to determine the amount of oxygen necessary to sustain life, and has found that it is impossible to account for the performances of fakirs.

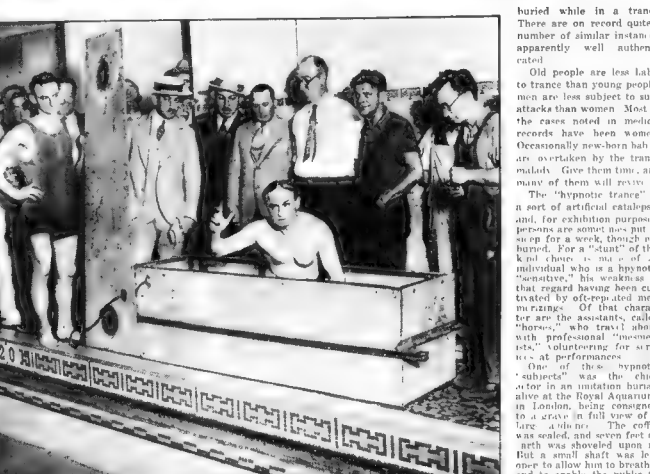

The experiments were conducted by the United States Bureau of Mines, under the direction of Mr. J. H. Pelt. The experiments were conducted in a chamber of air-tight concrete, under the supervision of Mr. J. H. Pelt. The experiments were conducted in a chamber of air-tight concrete, under the supervision of Mr. J. H. Pelt. The experiments were conducted in a chamber of air-tight concrete, under the supervision of Mr. J. H. Pelt.

person has all the appearance of being dead, the vital processes being reduced to an almost minimum of energy is required to sustain life. Hence it is no wonder that the body of a person in a cataleptic state, when buried in a grave, is able to sustain life for a long time. The experiments of the United States Bureau of Mines have shown that a person in a cataleptic state can survive for a long time in a grave. The Late Harry Houdini About to Be Sealed in His Metal Casket and Lowered into the Water of the Swimming Pool, Where He Remained for an Hour and a Half Without Air.

buried while in a trance. There are on record quite a number of similar instances, apparently well authenticated. Old people are less liable to trance than young people; men are less subject to such attacks than women. Most of the cases noted in medical records have been women. Occasionally men have been overtaken by the trance. Give them time, and many of them will revive.

The "hypnotic trance" is a sort of artificial catalepsy, and, for exhibition purposes, persons are sometimes put to sleep for a week, though not buried. For a "stunt" of this kind, however, it is not an individual who is a hypnotic "subject," his weakness is in that regard having been cultivated by repeated mesmerizing. Of that character are the assistants, called "horses," who travel about with professional "mesmerists," volunteering for service at performances.

One of these hypnotic "subjects" was the chief actor in an imitation burial alive at the Royal Aquarium, in London, being consigned to a grave in full view of a large audience. The coffin was sealed, and seven feet of earth was shoveled upon it. But a small shaft was left open to allow him to breathe, and to enable the public to see his face. Thus he remained for six days, at the end of which he was dug up and awakened. How weak and complained of stiffness in his legs. He had been buried while in a trance. There are on record quite a number of similar instances, apparently well authenticated.

How extraordinary are the phenomena discussed in this story may be judged from observations recorded by the Bureau of Mines, summarizing results of the experiments already mentioned. Those experiments were conducted in an air-tight concrete chamber near Pittsburg, one of the objects being to determine the minimum amount of oxygen that would suffice to sustain human life.

It was found that a deficiency of oxygen in the air quickly impairs the mental faculties and particularly the judgment, producing a peculiar intoxication or delirium which renders a person incapable of intelligent action. Incidentally it causes a paralysis of the muscles, making it impossible to stand or walk. If the deficiency continues for only a few minutes, serious and even permanent injury to the nervous system, or even death may ensue. Atmospheric air contains about 21 per cent of oxygen. When the percentage falls below 15, there is trouble. At 9 or 10 per cent unconsciousness supervenes.

It is about four-fifths nitrogen. Exhaled from the lungs, the breath carries out all of the oxygen. Only one-fifth (or gas), some water vapor and a small percentage of carbon dioxide, together with part of the oxygen. Only one-fifth of the oxygen inhaled is absorbed. In a closed place, the oxygen accumulates to a poisonous degree. Air containing over 5 per cent of it, breathed for a long time, causes headache and dizziness.

The experiments proved that a man sitting still may consume less than 120 cubic inches of oxygen per minute. Walking slowly, he will consume 320 to 480 cubic inches; vigorous exercise may require 1,200 cubic inches. During short periods of extreme exertion, as in running a race of 100 yards, the quantity of oxygen consumed may be much greater.

These are facts, indisputable. When they are fully considered, the puzzle of long survivors of oxygen in captivity and in voluntary burial (as in the case of the holy Hindus cited) seems altogether beyond explanation.

There is in this condition such a seeming stoppage of every faculty essential to life that it is impossible to understand how existence can go on. In cases where depression of the vital functions attains an extreme degree, the patient appears to be dead, even to the careful and expert observer. Yet the sufferer may actually be aware of all that is going on about him, though unable to give the slightest indication of consciousness. Undoubtedly it has often happened that persons have been buried while knowing all the details of preparations for their interment.

The mother of Gen. Robert E. Lee, the famous Confederate leader was subject to recurrent seizures of this kind. Knowledge of this fact rendered her attending physicians cautious in their final pronouncement that she was dead. Three days later she was buried. While the sexton was filling her grave, he heard knocks and smothered cries from the coffin. The lady was alive, and, hastily discovered, lived several years longer.

There is a remarkable but true story of Lady Edgumbe, grandmother of the Earl who now bears that nobiliary title. Having apparently died, she was buried in a church on the estate, laid in the family vault. On one of her fingers was a valuable ring, which, because she prized it greatly as a personal possession, was not removed. The sexton of the church, knowing of the ring, entered the vault at night to steal it. It fitted so snugly that he was obliged to use force. The lady, aroused, suddenly sat up in her coffin, and the thief, seeing light in terror, leaving the doors of the vault and the church wide open. Whereupon the supposed corpse climbed out of the coffin, walked, clad in her shroud, to her house, and, meeting her husband, fainted in his arms. When revived she found herself in her own bed, in ordinary surroundings. It may even be true that the whole affair was a hideous nightmare. She never knew the real circumstances.

In November, 1901, a Miss Bohin arrived at Palermo (in France) from Brazil, on the steamship La Plata. Supposed to be suffering from yellow fever, she was sent by the local health authorities to the lazaret, where she "died." As a nurse noticed that her body was not cold, and entered a protest which caused the lady's father to have her body examined. It was found that she had given birth to a child in her coffin. An autopsy showed that she had died of suffocation.

On January 28, of the same year, at Ghent, workmen opening a burial vault were horrified to discover a young girl lying across the steps leading down inside. She was quite dead, and the presumption was that she had been

WHEN you visit the show-room of any General Motors car-dealer, you are certain to

Color Harmony—The colors for every car with Body by Fisher are selected by artists who through long experience have learned what colors are most pleasing when applied to a motor car body. Frequently several color designs must be created and criticized by experts before one is selected.

Hardware—Fisher introduced the period influence in automobile hardware design. Fisher body door window regulator and lock handles, dome lights and instrument panels, are all of the highest grade and designed in period treatment by artist-craftsmen.

Upholstery Material—Fisher uses mohair, velour and broadcloth, selected with particular attention to long wear and color fastness. All Fisher upholstery material is subjected to most severe tests and only the best in the particular weave decided upon is used.

be aroused to admiring enthusiasm by the beauty of the various models on display. The salesman with whom you talk will tell you that the bodies for all these cars are designed, engineered and built by Fisher. Each bears the world-known signature plate, "Body by Fisher". You may always feel positively sure that any car bearing this Fisher symbol is the greatest value, and the most beautiful and comfortable car, in its particular price field. So true is this, that anyone planning the purchase of a new car would not only be safe, but wise, in confining his choice to those cars with Body by Fisher.

The New Individual Dresses

Authoritative and Newest Fashions From the Studios of the Most Distinguished French Dress Creators, Drawn by Soulie, the Foremost Fashion Artist of Paris

A Gown from Lanvin Entirely Composed of Malt Ribbon. The Bodice Has the Ribbons Going Round Horizontally, While the Skirt Is Covered with Loops of Varying Length. In the Front Is an Application of Black Velvet Ribbon with a Diamond Buckle. The Color, in This Case, Was White, but Lanvin Shows the Gown in Her Collection in Several Shades, Including Her New Madonna Blue. The Gown Is Sleeveless, and Is Meant to Be Worn for Formal Daytime Occasions.

The Seated Figure Wears a Costume of Spanish Inspiration. The Caped Coat, From Callot, Is in Heavy Black Malt, With a Red Lining. The Wearer Has a Hat From Le Monnier, a Wide Rolled Black Felt, With a Taffeta Rose Crushed Over the Ear.

The Middle Gown Is an Original Interpretation of the Bolero Line, in Triple Effect. Done by Poiret in Sky-Blue Broadcloth, Trimmed With Small Silver Buttons, Set in Rows. The Sleeves and Hat Are Embroidered to Match With the Half-Circles of Steel. The Skirt Is Longer Than the Mode Demands, but Poiret Likes Rather Long Skirts.

Beside Is Another Poiret "Robe de Style" Strongly Suggestive of the Romantic Period. The Gown, in Black Taffeta, Has a Fitted Bodice and a High Collar. The Skirt Short in the Front to Show a Simulated Lace Petticoat, in Ecru Color, and Lace of the Same Shade in Ruffles in the Three-quarter Length Sleeves. The Wide, Simple Hat of Black Taffeta Brim Lined With Ecru Taffeta, and With a Simple Ribbon as Trimming.

with fur, velvet gowns beautifully draped—color and fabric as different as possible from the neutral-toned sports fabrics that have almost monopolized daytime dress for so long. And in the evening, we find a diversity of styles, a dignity and elegance, which is at variance with the prolonged vogue of the "little chiffon rag," and the scintillating sheath of narrow cantonines.

A few advanced women have gone even further. They have dared to break away sharply from "what they are wearing." They have begun to appear on special occasions in styles obviously created for them.

There is nothing more dangerous than originality in dress; for there is nothing easier than sensational novelty. Turn your own mind, wear your own ideas on your hands, or your gloves on your feet, and you can attract a crowd in five seconds. But to compose, and then to wear, a costume that is really individual, that suits and interprets your personality, takes something little short of genius.

It is dangerous—but for that very reason, most attractive to original minds. This lurking desire of many women to dress in a distinctive style is the explanation of the never-ending vogue of the robe de style. So many women who appear all day long and most evenings in simple, practical clothes enjoy, once in a while, an appearance in the important, gorgeous garments of earlier, more leisurely times. It satisfies in a legitimate way that secret delight in "dressing up," which is left in the hearts of so many of us.

But to get away from the robe de style, and still wear an individual, striking costume is a very difficult, daring thing to do. Nevertheless, all five illustrations on this page are taken from sketches of actual women, actually doing this very thing. Some of them were seen at Deauville, others at Le Touquet, still others at Biarritz, and all of them attracted admiring attention. First we have a new Lanvin creation, made entirely

of ribbon. Then another from Jany, with a lace blouse below, and a skirt of black crepe marocain, draped up on one side in a striking way. This was a daring enough combination, but worn by a very beautiful girl, it "let over" decidedly. The high waistline was suggested by the raised line of the skirt visible under the edge of the lace. Thirdly, we have a Spanish-looking costume from Callot, worn with a very Spanish hat from Le Monnier, in black felt with a rose over one ear. Fourthly, there is a gown in flexible broadcloth from Poiret, famous as a designer of "robe de style" originals.

This costume showed an adaptation of the bolero line in a high interpretation which was very new. Lastly, there is a modern Poiret version of an 18th gown, done in taffeta, the material par excellence of that epoch which is so prominent just at the moment in the minds of a group of artists, illustrators, and literary men of Paris—a protest, no doubt, against the Modernist craze. This period has already had much influence on Paris fabric designing. The little flower patterns, the line checks, dots, and small neat patterns of the French silk manufacturers, had on more occasions this Summer, and are all directly inspired by the so-called Romantic age.

I thought it would be interesting to show you, this time, five distinctive costumes, actually worn with success by five French women, especially as each of the five was admitted in her own way. I do not think we shall see a sudden, overwhelming result of this movement towards individuality. Our simple clothes of the moment are too practical, too comfortable too appropriate to living conditions, for that.

"Great oaks from little acorns grow," however, and the fact that four designers found clients willing to wear, and to wear well, five original creations, and that they were admired for doing so, is a step in the right direction.

An Interesting Model from Jenny of Black Crepe Marocain and White Lace. The Lace Is Used in a Blouse of Bolero Line, with a Round Neck and Long Sleeves. The Skirt Is Very Narrow at the Hem Line. It Has a High Waistline, and the Dark Edge of the Skirt Is Glimpsed Under the Lace, Adding to the Short-Waisted Effect. The Hat Is a Wide, White Felt.

PARIS, Oct. 28.
FASHIONS used to be criticised for being capricious. So they cured themselves of that fault, only to find they had to meet the charge of monotony. How often must women hear:

"Modern clothes are such a bore because women look alike!"

"I'm so tired of the everlasting jumper and skirt—or of the long straight coat—or of the chiffon evening frock! You women are all sheep. Why don't you wear something original?"

Of course, it is quite impossible to please all of the people all of the time with anything so personal as fashions, and there is no use in wading time over the unobtainable. But the creators and interpreters of the mode cannot be accused of complete apathy, after all. Otherwise capricious Dame Fashion would never be on trial at the present moment on a charge of excessive uniformity. So much is just plain logic. The designers keep their eyes and ears alert in these days as they never did before, for their best clients demand first of all clothes that are suitable to their lives, and as the conditions of these lives change with great rapidity, it is never safe for creators of the mode to go to sleep on their quickly fading laurels.

What a change from the days when a famous creator sat in his study on the rue de la Paix serenely designing the most uncomfortable and preposterous garments exactly as his fancy dictated, and then imposing them on the women of all countries whether they liked them or not!

One significant phase of the situation is a revolt against too informal attire.

So we have as one of the leading characteristics of the Winter collections a revival of what might be called formal dress for the daytime—velvet clothes trimmed

Recent Researches That Indicate The Mysterious M

Curious Evidence That They Had Been Forced Into America Gave Europe Its Belief in

A Sinister Altar at Copan, Guatemala. The Figure of the God at the Back Points to His Heart, and His Sacrifices Probably Had Their Hearts Torn Out from Them on the Huge Stone Slab Which Bears a Curious Death's Head. The Jungle Now Shrouds This Relic of Cruel Superstition. An Original Catherwood Drawing.

THE location of the home-land of the Mayans, the mysterious, highly civilized race that built the now ruined but once magnificent cities and temples of Central America, is one of the greatest puzzles science has ever tried to solve.

Science knows where every other people on earth came from except this one. It can trace the development of these other peoples, their birthplace and migrations by the evidence they left behind them. It cannot trace the Mayans.

The Mayans built their first cities in Guatemala. Their first appearance on this continent was apparently about 2,400 years ago. They brought with them a full-blown civilization. They were not only marvelous architects, but astronomers and artists as well. They had a highly organized system of government and religion and a hieroglyphic writing more complex than that of the Egyptians.

Science can follow the progress of the Egyptian civilization, long considered the oldest on earth, up from its first rude beginnings in the Stone Ages. But neither in Central America nor anywhere else has there been found the slightest remains of the evolution of that of the Mayans. So far as any such evidence is concerned, they might have dropped down into Central America one night from another planet.

Their first cities were, in fact, better than their last. And their descendants to-day are ignorant half savages, who know no more about the jungle-covered monuments of their accomplished forefathers than the rest of the world. Indeed, they know far less.

Science knows, however, that there must have been a beginning to this mysterious civilization. There is evolution in everything, and races are as subject to its laws as individuals are.

In what land did the Mayans evolve their arts, sciences and government before they transplanted them to America? For certainly they were not evolved here.

Recent researches seem to indicate that they came from a great island now submerged beneath the Atlantic Ocean. Or, rather, that they came from two islands, one of which, nearer Europe, was first destroyed by volcanic forces and earthquakes centuries before the other. The second island from which the Mayans migrated was sunk about the beginning of the Christian Era, and of it the West Indies, or Antilles, are fragments.

This is the theory just put forth, supported with much new and curious evidence, by Dr. Lewis Spence, the distinguished English archaeologist and ethnologist. While Dr. Spence refers to the old legend of Atlantis, the sunken continent, which Plato, the ancient Greek philosopher, attributed to the Egyptian priests at Sais, he rejects its fantasies and those which, like the far-fetched parallels of Ignatius Donnelly have done so much to discredit the story,

described, nor was it the cradle of all human civilization.

The people of the destroyed islands, Dr. Spence thinks, were still in the Stone Age, but 25,000 years ago they were further advanced than any people on any other part of the globe, even the Egyptians. When the great island closest to Europe began to sink there were migrations to the mainland. These emigrants were what science has named the Cro-Magnon people, from the district in France where their bones were first found. They were a fair-skinned folk, the men averaging six feet one inch in height and the women five. The brain capacity of their skulls was considerably greater than the average of to-day. They were first rate artists and artisans, hunted, and lived in caves.

This people was wiped out about ten thousand years later by another migration from the vanishing island. These emigrants were a small, dark and wiry race, who understood navigation, used painted pebbles as an alphabet, but were not as civilized as the tall, blond Cro-Magnons.

At about this time the second island, lying closer to America, began to experience the vicissitudes of the other. Volcanic outbursts and earthquakes shook it, and it, too, began to sink beneath the sea. At last, perhaps four or five centuries before Christ, there began the final cataclysm that left of the island only the scattered fragments of the West Indies. Just as the Cro-Magnon people and the Azil-Tardinians passed on into Europe from the disintegrating first island, so the Mayans passed on from the sinking second island to the Central American mainland.

There is geological evidence that extensive lands once existed in the locality of Dr. Spence's islands. The United States Geographic Survey charted high plateaus there on the ocean bed, and brought up specimens of lava, or volcanic rock, which must have been formed when these plateaus were above the surface of the ocean. There is an unmistakable difference between lava which is emitted by a volcano under the sea and lava emitted from terrestrial volcanoes and hardened in the air. William Beebe, the American scientist, during his recent expedition to the Sargasso Sea, brought up in his dredges similar specimens of lava from points many miles distant. There can be no doubt, then, that land once did exist where there is now only rolling ocean.

It was about 200 B. C., Dr. Spence thinks, that the first Mayans arrived on the mainland from the disintegrating island he calls Antilla.

They were led by a chief whose name the legends give as Quetzalcoatl, Kukulcan and Guemal. All meaning "Feathered Serpent." They met no opposition from the native tribes, and began to build their cities and extend their civilization. The legends agree upon his appearance as a man of fair skin and long, yellow beard. He and his followers wore robes of black linen, cut low at the neck and with short sleeves. Quetzalcoatl, by the way, was afterward elevated to full godship by the Aztecs, who made,

him the deity of the winds and one of the four beings who bear the earth on their shoulders.

All the legends are quite explicit upon what happened to him. Two native sorcerers became jealous of his influence. Quetzalcoatl became ill, and one of the sorcerers came to his palace disguised as a physician and proffered him a draught, which, he assured him, would cure him and make him forget his home-sickness. Quetzalcoatl drank the medicine. It made him drunk, and instead of dulling his nostalgia, increased it. The sorcerers, having gotten him intoxicated, persuaded him that if he would go back to his home he would regain his youth and return "as a boy." The hero was so impressed that he set forth to the coast, commanded that "a raft of serpents" be constructed for him, and in this was carried away to his homeland. He never came back.

This is one proof, Dr. Spence believes, that the highly cultured Mayans came from a land to the east of Central America. There can be no doubt that there was a leader who was named, or to whom the name was given, of Quetzalcoatl. The story of the job put up on him by the sorcerers is a human and credible one—they took him in a moment of weakness, got him drunk and persuaded him to go back home. If he had to go down to the seashore and take a boat, that proves he—and, of course, all the Mayans whom he had led—came from some land off in the sea to the east.

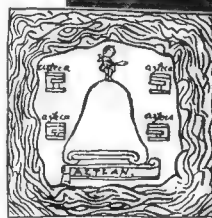

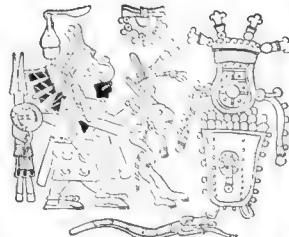

But in all the legends it is distinctly stated that the Mayans came from the east over the waters, and that they had been driven out of their country by floods, storms and earthquakes.

"A book in the language of the Quiche Indians of Guatemala, said to have been written by Votan, a local name for Quetzalcoatl, was at one time in the possession of Nunez de la Vega, Bishop of Chiapas," says Dr. Spence. "The intolerant and bigoted prelate destroyed the original in his wicked burning up of the Mayan books, manuscripts and paintings in 1591."

A certain Ordonez de Aguilar had, however, made a copy of it before its destruction, and incorporated it in a book that he wrote and named *Historia de Cielo*. In this work Quetzalcoatl is called Votan. He describes himself as "a snake." This was probably the totem of his tribe. It also throws light upon why he was named "Feathered Serpent" in all the legends that deal with him. Feathers have from time immemorial been a symbol of leader-

Witches Dancing Around an Idol, a Wall Painting of the Lost Aryan Race Painted by Them at Least 15,000 Years Ago in a Cave in Spain. Beneath It is a Picture of a Mayan Witch Making a Sacrifice of a Child. Dr. Spence Believes That the Superstition of Witchcraft Spread to Europe and America from One of the Now Submerged Atlantic Islands.

Homeland of the Aztecs, a Map from an Ancient Mexican Manuscript. Here Their Original Country Is Shown as an Island in the Center of Which Is a High Mountain, Probably a Volcano.

ship and royalty. Quetzalcoatl was literally the "Head of the Snake King wearing the Feathers," that is, the insignia of his office.

Votan, that is Quetzalcoatl, goes on to relate that he proceeded to America by divine command, his mission being to lay the foundations of civilization there. He landed and ascended the Usumacinta River. At a favorable spot he founded the city of Palenque, just over the border of Guatemala, in Mexico, whose ruins contain the most finished examples of Mayan art, among them what is known as "the beau relief," a bit of sculpturing that has no superior among the best works of the Greeks.

**rica by Volcanic Convulsions of a Now Submerged Land,
Witches Who Rode Broomsticks and Slaughtered Children
and Were Destroyed**

dicant that his trail had been followed, without consulting him, by more colonists anxious to get away from the threatened homeland and who found it easier and safer to follow the path he had blazed than to strike out for themselves and found new cities. That they were in considerable numbers is clearly by the fact that Votan clearly had to make a treaty with them before he could resume his leadership of Palenque. When he returned to the town he found the Huichatan River, known from its subterranean chambers as the House of Darkness, and here he deposited the records of his journey and the history of the land from which he had come. In the city of certain old men called *tlapalines* and an order of priests.

try for the Mayans would not puzzle science today. It is not hard to discern, says Spence, a curious legend of the Mayans which seems to have been a memory of the fate of their homeland. This tradition has been set down by Itz'lixochitl, a native chronicler who lived shortly after the conquest of Mexico by Cortez, and who had exceptional opportunities for obtaining good information. He does not say that the legend is a fiction, but he does mean "the great builders," "the enlightened ones." He says that they set out to colonize "distant countries" because of civil wars, that they landed at Huatuclo, and builded a city which they called Tollan. The city they came from they called Tlapalalan, and sometimes Tlapalapan. Their legend was named Quetzacoatl, of windy complexion and long beard.

Numerous chroniclers, he says, testify that the Witches' Sabbath was quite as notorious an institution in ancient Mexico as in mediaeval Europe. The Mexican witch cult revolved around the idea of the Cuateteo or Cuapipiltin. Of these Sahagun, the Spanish historian of Mexico, says:

Which Is Built Into the Foundations of the Great Is Unknown. The Picture Is Also from One of the Cave It, Catherwood's Remarkable Original Drawing is. This City, Now Covered Entirely by Jungle, Was Almost Vanished Mayan Race, and Was Never Like Most of the Other Cities.

After coming back from one of these visits he found that others of his race had also immigrated to Palenque, and, so the manuscript says, "made an amicable agreement with them." This would in-

Like the European witches, they flew through the air on broomsticks, and met at the crossroads.

TUBS, tiles, sinks, mirrors . . . a sprinkle of BAB-O . . . "a wipe and it's bright." Try BAB-O once . . . and you'll never be without it.

BAB-O! Never before such a marvelous bathroom brightener! Old-fashioned hard-working housewives may still use ordinary pot-and-pan cleansers and "scratching" powders on porcelain and enamel. But the modern housekeeper uses BAB-O . . . created especially for the *bathroom* . . . the room that must always be spotless . . . gleaming. There is nothing that shines tubs, sinks, tiles, and mirrors . . . so efficiently and quickly. BAB-O removes, with magical ease, the most obstinate water-lines, films, marks, stains and rust. Even old porcelain and enamel can be restored to their original glossy whiteness. Just a sprinkle of BAB-O on a damp cloth . . . "a wipe and it's bright."

BAB-O
brightens
bathrooms

Made & guaranteed by **B. T. Babbitt, Inc.**, New York Established 1836

Boston Philadelphia Baltimore Chicago Maron, Ga. Fort Worth San Francisco

Do you cherish beautiful teeth and coral gums -

then
heed this
warning-

GUARD THE DANGER LINE

Mouth beauty is so important these days! Not only for the charm of a pleasing smile—of brilliant teeth and coral gums—but also because decayed teeth and infected gums can bring ill-health and suffering by poisoning the entire system.

But how are you to protect your teeth and gums? Look through your favorite publications. You will find a dozen theories on what causes tooth decay and gum infections. On your druggist's shelves you will find 25 or 50 dentifrices competing for your favor.

Is it any wonder that countless people are confused?

That the dangerous situation caused by this confusion might be brought to an end, E. R. Squibb & Sons decided to get a verdict from the only authoritative source—the dental profession. A research institution, famous for its high standard and impartiality, asked 50,000 practicing dentists certain questions on mouth hygiene.

The replies received show that the dental profession agrees almost unanimously on what is the principal cause of tooth decay and gum infections and also on what constitutes the best safeguard against these dangers.

95% of the answers agreed that acids are the most frequent cause of tooth decay and irritated gums.

95% agreed that the most serious trouble occurs at the place where teeth and gums meet—known as *The Danger Line*.

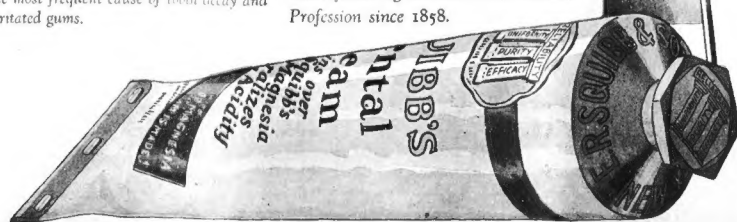

85% agreed that the best product known to neutralize acids in the mouth is Milk of Magnesia.

These answers point out the safe and sure way to protect your teeth and gums, for Squibb's Dental Cream is made with more than 50% Squibb's Milk of Magnesia in a most convenient and effective form to neutralize acids at *The Danger Line*. When you brush your teeth with it, tiny particles of Milk of Magnesia are forced into every pit and crevice where acids can form. There they remain to safeguard your teeth and gums for a long time after use.

Therefore, it follows that if you see your dentist twice a year and use Squibb's Dental Cream regularly you will be doing everything possible to safeguard your teeth and gums.

Squibb's Dental Cream was developed to meet every requirement of a correct dentifrice. It cleanses thoroughly, it soothes and strengthens the gums, it relieves sensitive teeth. It is pleasant to use and safe for children and adults alike. On sale at all druggists—40c a large tube.
